

**Ethics in Engineering Practice**  
**Prof. Susmita Mukhopadhyay**  
**Vinod Gupta School of Management**  
**Indian Institute of Technology, Kharagpur**

**Lecture - 26**  
**Research Ethics (Contd.)**

Welcome back in this session we are going to discuss about responsible authorship and credit in engineering research.

(Refer Slide Time: 00:27)

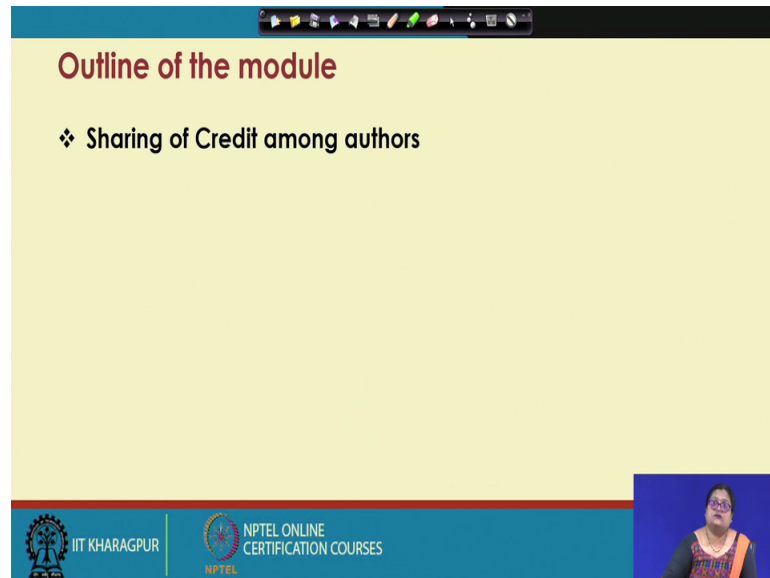

**Outline of the module**

- ❖ Introduction
- ❖ Conditions for crediting as citation
- ❖ Acknowledgement
- ❖ Qualifications for authorship
- ❖ IEEE norms for qualification for authorship
- ❖ Responsibilities of an author
- ❖ Categories of Author
- ❖ Issues of Plagiarism

IIT KHARAGPUR | NPTEL ONLINE CERTIFICATION COURSES

So, the outline of the module will be like what you understand for crediting as citation, acknowledgement, qualification of authorship, their responsibilities of an author, categories of an author, issues of plagiarism, sharing of credit amongst authors and final aspects with related to it.

(Refer Slide Time: 00:48)

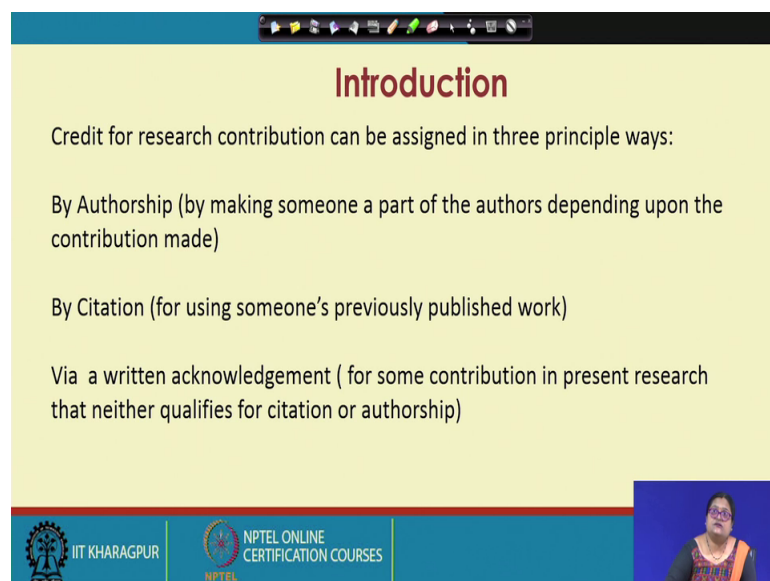

**Outline of the module**

- ❖ Sharing of Credit among authors

IIT KHARAGPUR | NPTEL ONLINE CERTIFICATION COURSES

The slide features a yellow background with a blue header and footer. The header contains the title 'Outline of the module' in red. The main content area has a single bullet point '❖ Sharing of Credit among authors'. The footer includes the IIT Khharagpur logo and the NPTEL Online Certification Courses logo. A small video inset of the presenter is visible in the bottom right corner.

(Refer Slide Time: 00:56)

**Introduction**

Credit for research contribution can be assigned in three principle ways:

- By Authorship (by making someone a part of the authors depending upon the contribution made)
- By Citation (for using someone's previously published work)
- Via a written acknowledgement ( for some contribution in present research that neither qualifies for citation or authorship)

IIT KHARAGPUR | NPTEL ONLINE CERTIFICATION COURSES

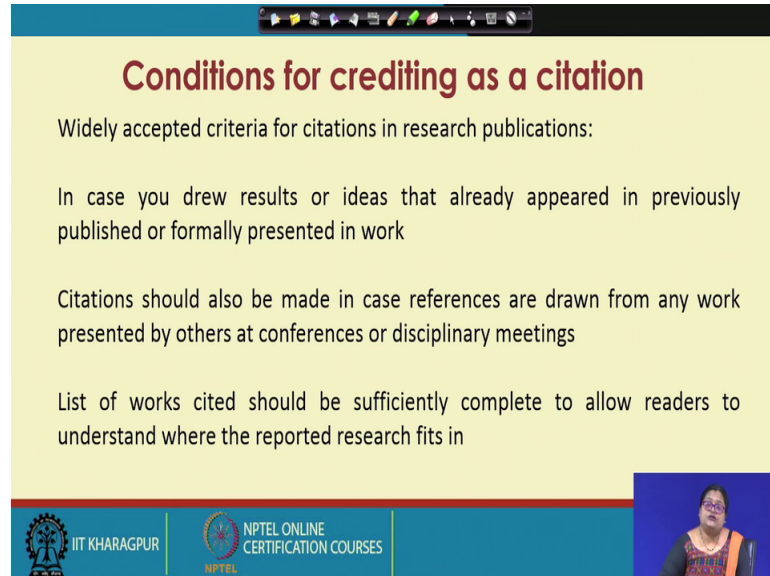

The slide features a yellow background with a blue header and footer. The header contains the title 'Introduction' in red. The main content area lists three ways to assign credit for research contribution. The footer includes the IIT Khharagpur logo and the NPTEL Online Certification Courses logo. A small video inset of the presenter is visible in the bottom right corner.

So, credit for a research contribution can be assigned in three principle ways: by authorship, by citation and via a written acknowledgment.

So, authorship is by making someone a part of authors depending upon the contribution made, citation is for using someone's previously published work and via written acknowledgement means for some contribution in present research that neither qualifies for citation or authorship. So, before we move ahead we can understand this we are again taking as a part of a duty and then obligation to recognize the contribution made by

others in terms of our the work done a contributions made to the research that is being done.

(Refer Slide Time: 02:02)

**Conditions for crediting as a citation**

Widely accepted criteria for citations in research publications:

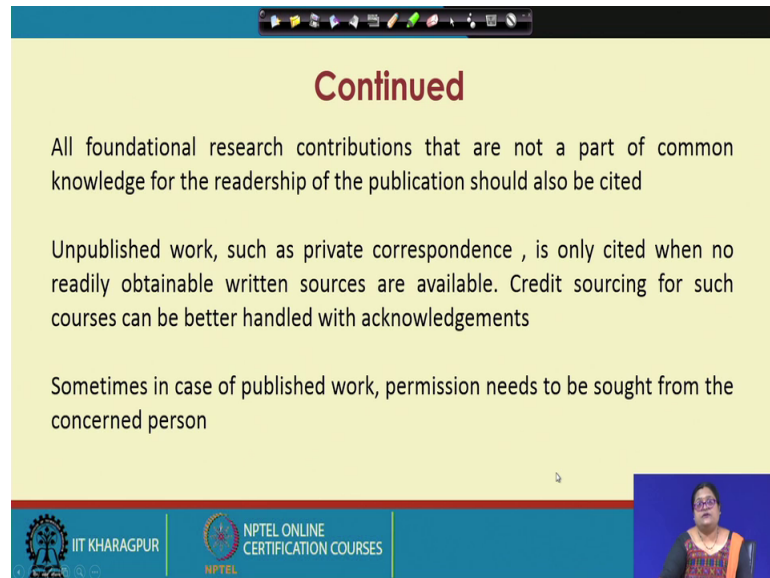

- In case you drew results or ideas that already appeared in previously published or formally presented in work
- Citations should also be made in case references are drawn from any work presented by others at conferences or disciplinary meetings
- List of works cited should be sufficiently complete to allow readers to understand where the reported research fits in

IIT KHARAGPUR | NPTEL ONLINE CERTIFICATION COURSES | NPTEL

The conditions for crediting as a citation are widely accepted criteria for citation in research publications are: in case you drew results or ideas that already appeared in previously published or formally presented in work. Citations should also be made in case references are drawn from any work presented by others at conferences or disciplinary meetings. List of works cited should be sufficiently complete to allow readers to understand where the reported research fits in.

(Refer Slide Time: 02:46)

**Continued**

All foundational research contributions that are not a part of common knowledge for the readership of the publication should also be cited

Unpublished work, such as private correspondence, is only cited when no readily obtainable written sources are available. Credit sourcing for such courses can be better handled with acknowledgements

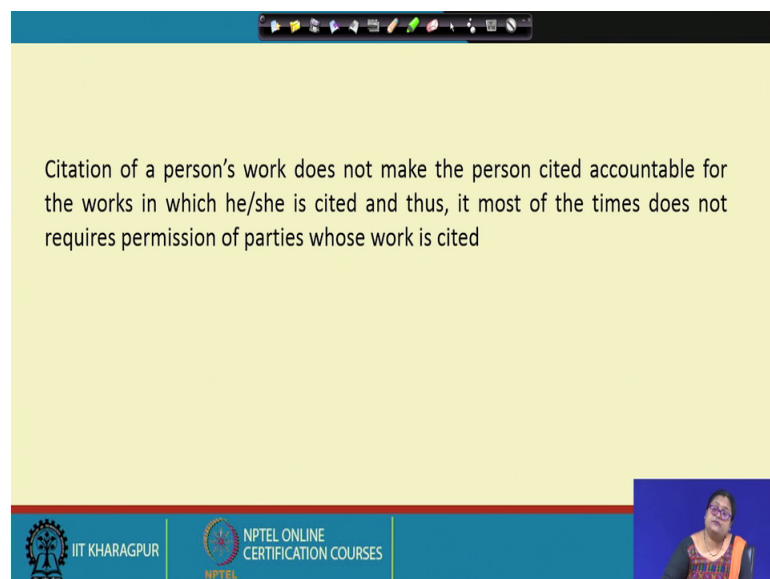

Sometimes in case of published work, permission needs to be sought from the concerned person

IIT KHARAGPUR | NPTEL ONLINE CERTIFICATION COURSES | NPTEL

*(Note: A small video inset of a woman is visible in the bottom right corner of the slide.)*

All foundational research contributions that are not a part of common knowledge for the leadership of the publication should also be cited. Unpublished work like private correspondence is only cited when no readily available written sources are available; credit sourcing for such courses can be better handled with acknowledgements. Sometimes in case of published work, permission needs to be sought from the concerned person this part is very important to understand like; if you are citing someone somebody's work, sometimes permission requires to be taken.

(Refer Slide Time: 03:37)

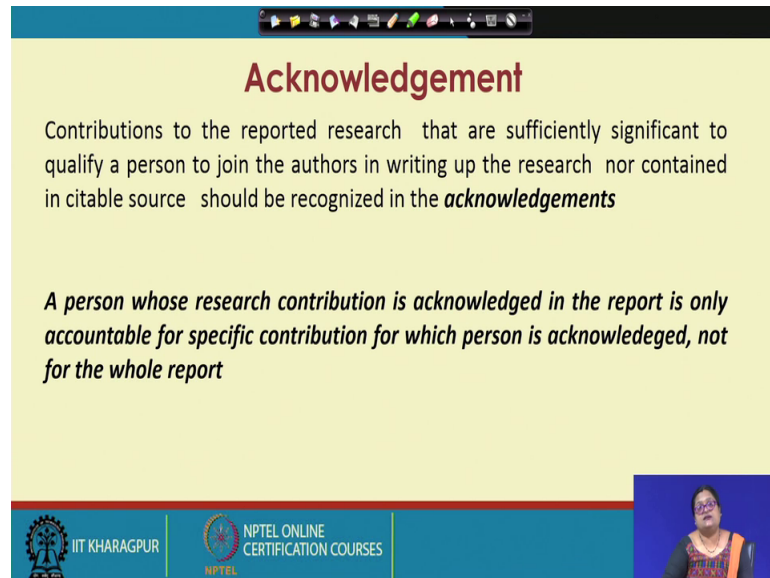

Citation of a person's work does not make the person cited accountable for the works in which he/she is cited and thus, it most of the times does not requires permission of parties whose work is cited

IIT KHARAGPUR | NPTEL ONLINE CERTIFICATION COURSES | NPTEL

*(Note: A small video inset of a woman is visible in the bottom right corner of the slide.)*

Citation of a person's work does not make the person cited accountable for the work in which he she is cited and thus, it most of the times does not requires permissions of parties whose work is cited. Because, there is no accountability so, of the person who is citing cited for the present works so, sometimes in most cases permission is not required also.

(Refer Slide Time: 04:12)

**Acknowledgement**

Contributions to the reported research that are sufficiently significant to qualify a person to join the authors in writing up the research nor contained in citable source should be recognized in the **acknowledgements**

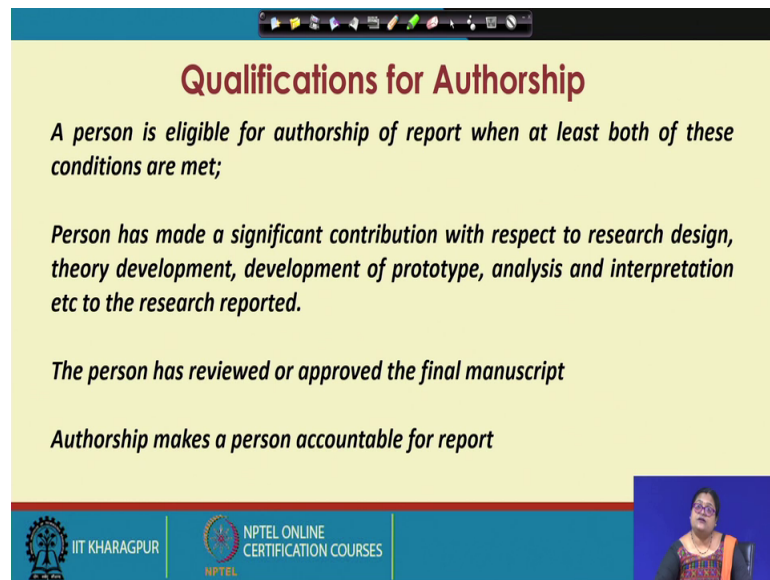

*A person whose research contribution is acknowledged in the report is only accountable for specific contribution for which person is acknowledged, not for the whole report*

IIT KHARAGPUR | NPTEL ONLINE CERTIFICATION COURSES | NPTEL

Now, how citation is different from acknowledgement, contributions to the reported research that is sufficiently significant to qualify a person to join the authors in writing up the research nor contained in citable source should be recognized in acknowledgements. A person whose research contribution is acknowledged in the report is only accountable for the specific contribution for which the person is acknowledged not for the whole report. So, we should be very very specific about we are acknowledging whom for what kind of work because, that person is accountable for that specific contribution that is mentioned in the report.

(Refer Slide Time: 05:18)

**Qualifications for Authorship**

- A person is eligible for authorship of report when at least both of these conditions are met;*
- Person has made a significant contribution with respect to research design, theory development, development of prototype, analysis and interpretation etc to the research reported.*
- The person has reviewed or approved the final manuscript*
- Authorship makes a person accountable for report*

IIT KHARAGPUR | NPTEL ONLINE CERTIFICATION COURSES | NPTEL

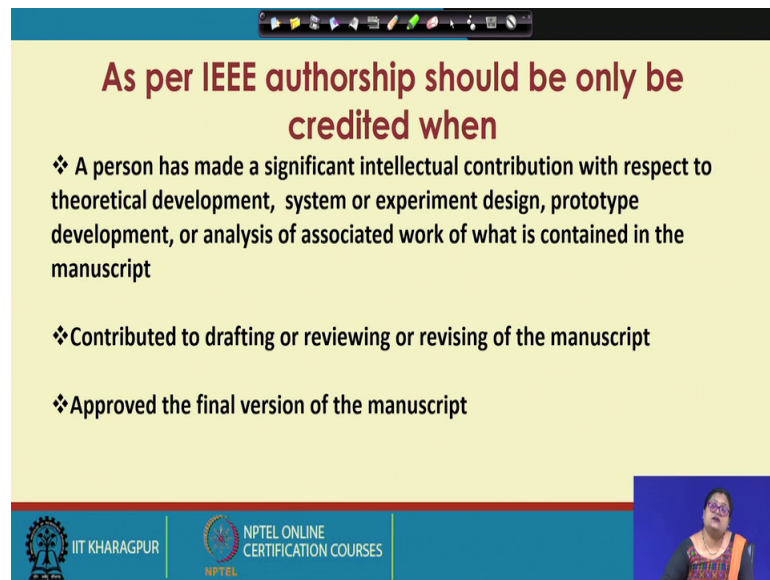

Now, what are the qualifications for authorship? A person is eligible for authorship of a report when at least both of these contributions are met; person has made a significant contribution with respect to research design theory development, development of prototype, analysis and interpretation etcetera to the research reported.

The person has reviewed or approved the final manuscript; authorship makes a person accountable for the report. So, these needs to be clearly understood clear, clear idea needs to be taken like what is the responsibility of the person whose works cited, what is the responsibility for the person who is acknowledged and what is the responsibility of the person who is like authorship and what makes the person what degree of contribution makes the person qualify eligible for authorship? These are may be final discussion which needs to be that we need to be very careful when we enter into collaborating research practices.

So, that if somebody comes and claims for authorship, we have to understand whether that person is eligible for authorship or not or only acknowledging that persons contribution is or citing somebody's work is ok. Like; if we do not know this final details then sometimes it may so, happen, somebody may come and claim for the authorship and we do not know in that case what is appropriate action to be taken should we like recognize the person as the author and give credit for it or not.

(Refer Slide Time: 07:24)

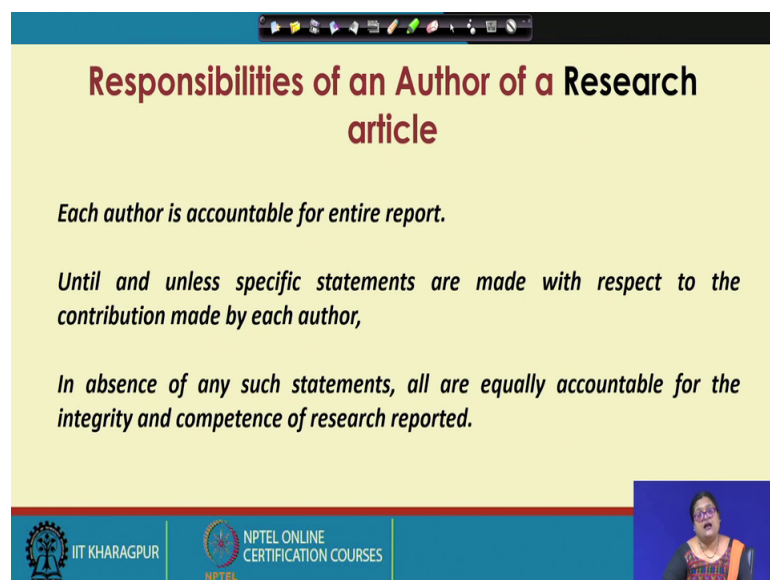

**As per IEEE authorship should be only be credited when**

- ❖ A person has made a significant intellectual contribution with respect to theoretical development, system or experiment design, prototype development, or analysis of associated work of what is contained in the manuscript
- ❖ Contributed to drafting or reviewing or revising of the manuscript
- ❖ Approved the final version of the manuscript

IIT KHARAGPUR | NPTEL ONLINE CERTIFICATION COURSES | NPTEL

As per I triple E authorship should be only be credited when a person has made a significant intellectual contribution with respect to theoretical development, system or experiment design, prototype development, or analysis of associated work of what is contained in the manuscript. Contributed to drafting or reviewing or drafting or reviewing or revising of the manuscript approved the final version of the manuscript.

(Refer Slide Time: 08:04)

**Responsibilities of an Author of a Research article**

*Each author is accountable for entire report.*

*Until and unless specific statements are made with respect to the contribution made by each author,*

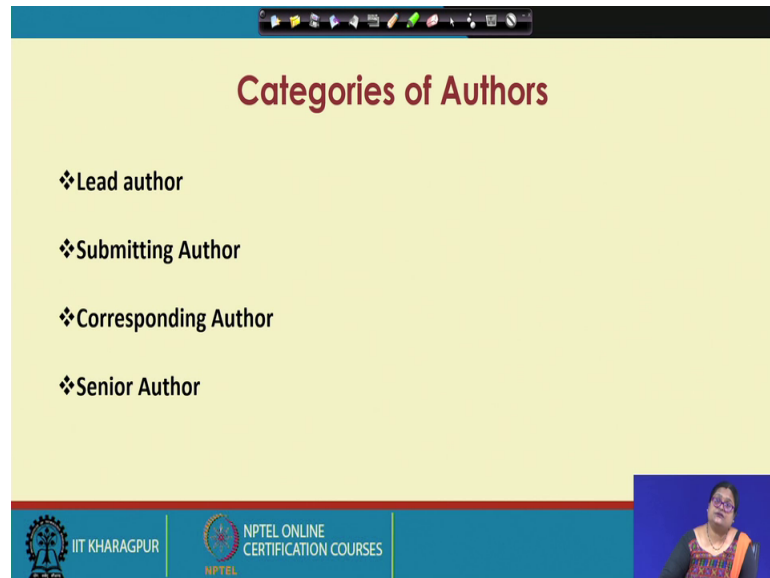

*In absence of any such statements, all are equally accountable for the integrity and competence of research reported.*

IIT KHARAGPUR | NPTEL ONLINE CERTIFICATION COURSES | NPTEL

What are the responsibilities of an author of a research article? Each author is accountable for the entire report until and unless specific statements are made with

respect to the contribution made by each author. In absence of any such statements all are equally accountable for the integrity and competence of the research reported.

(Refer Slide Time: 08:34)

**Categories of Authors**

- ❖ Lead author
- ❖ Submitting Author
- ❖ Corresponding Author
- ❖ Senior Author

IIT KHARAGPUR | NPTEL ONLINE CERTIFICATION COURSES | NPTEL

Now, we have to understand clearly what are the categories of authors? So, who qualifies to be the first author, who qualifies to be the second author there could be sometimes what happens controversies regarding like suppose you are working in under your guide. So, who becomes a first author and who becomes the second author? So, there this could be some controversies regarding it. So, there were different categories of authors like; lead author, submitting author, corresponding author and senior author.

(Refer Slide Time: 09:14)

**Lead Author**

- Holds principle responsibility for work*
- Is the one who has made greatest intellectual contribution to work*
- Bears responsibility for whole report, even if others specified contributions are specified*

IIT KHARAGPUR | NPTEL ONLINE CERTIFICATION COURSES

Let us see what are these differences? Lead author holds the principle responsibility for the work is the one who has made the greatest intellectual contribution to work, bears responsibility for whole report, even if others specified contributions are specified.

(Refer Slide Time: 09:40)

**Submitting Author**

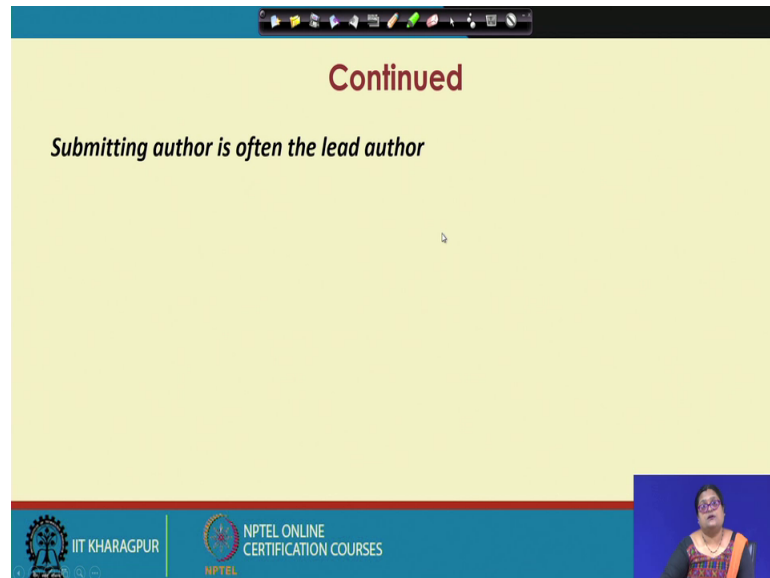

- One who submits the manuscript*
- Deals with journal editors*
- Only point of correspondence*
- Owns a special responsibility to see that all authors have fulfilled the criteria for authorship*
- Make sure that special journal requirements are met*

IIT KHARAGPUR | NPTEL ONLINE CERTIFICATION COURSES

Submitting author is one who submits the manuscript, deals with journals editors, only points of correspondence, owns a special responsibility to see that all authors have fulfilled the criteria for authorship, make sure that the special journal requirements are

met. So, these author tries to correspond to and fixed maintain like all the criteria with respect to the journal publication has been met or not.

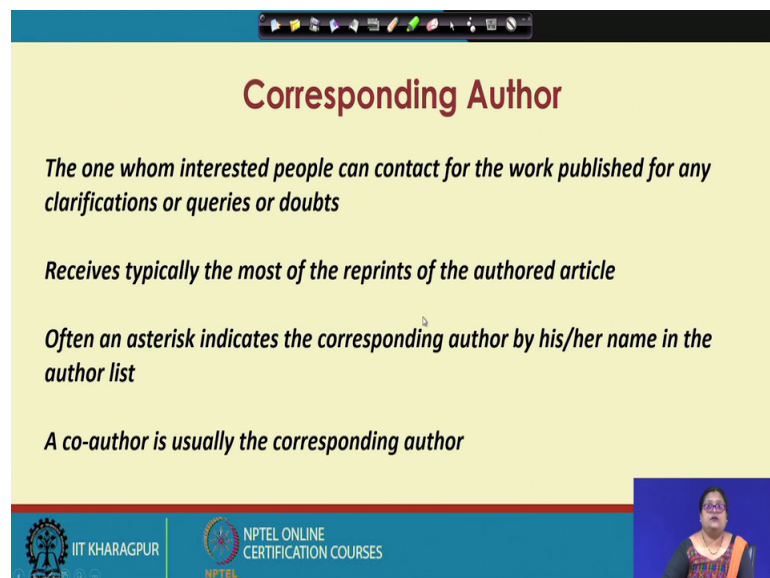

(Refer Slide Time: 10:18)

The slide features a yellow background with a dark blue header bar at the top containing navigation icons. The title "Continued" is centered in a dark red font. Below the title, the text "Submitting author is often the lead author" is displayed in a black, italicized font. At the bottom, there is a blue footer bar with the IIT Kharagpur logo on the left and the NPTEL Online Certification Courses logo on the right. A small video inset of a presenter is visible in the bottom right corner.

So, sometimes would happens submitting author is the lead author.

(Refer Slide Time: 10:26)

The slide features a yellow background with a dark blue header bar at the top containing navigation icons. The title "Corresponding Author" is centered in a dark red font. Below the title, four lines of text in a black, italicized font define the role: "The one whom interested people can contact for the work published for any clarifications or queries or doubts", "Receives typically the most of the reprints of the authored article", "Often an asterisk indicates the corresponding author by his/her name in the author list", and "A co-author is usually the corresponding author". At the bottom, there is a blue footer bar with the IIT Kharagpur logo on the left and the NPTEL Online Certification Courses logo on the right. A small video inset of a presenter is visible in the bottom right corner.

Corresponding author; is the one whom interested people can contact with the work published for any clarifications requiring or doubts, receives typically the most of the reprints of the authored article, often an asterisk indicates the corresponding author by his or her name in the author list, a coauthor is usually the corresponding author.

(Refer Slide Time: 10:56)

**Senior Author**

*The term is ambiguous and most of the time indicates the lead author or the senior most author*

*Usually the one of highest academic rank*

*Or*

*Of the greatest reputation in the field*

IIT KHARAGPUR | NPTEL ONLINE CERTIFICATION COURSES

NPTEL

The slide features a yellow background with a blue header and footer. The title 'Senior Author' is in bold red text. The definitions are in italicized black text. The footer contains the logos for IIT Kharagpur and NPTEL, along with a small video inset of a woman in the bottom right corner.

Senior author; it is an ambiguous term which talks of did sometimes talks of the lead author or the senior most author; who is in the highest academic rank or of the greatest reputation in the field.

(Refer Slide Time: 11:19)

**Plagiarism – A major issue**

It is generally understood to be the appropriation of another person's ideas, processes, results or words without giving any proper credit

It is considered as a serious research misconduct

It just doesn't apply to text but also graphics representations such as photographs, tables and charts as well

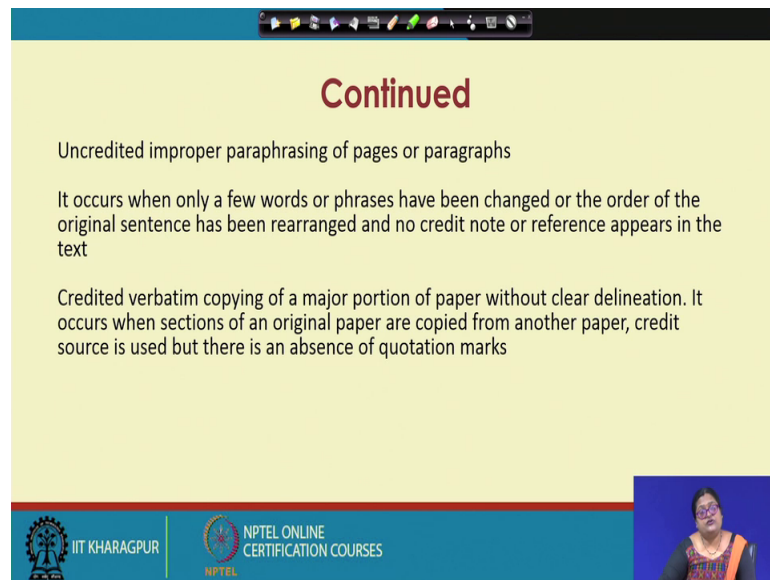

IIT KHARAGPUR | NPTEL ONLINE CERTIFICATION COURSES

NPTEL

The slide features a yellow background with a blue header and footer. The title 'Plagiarism – A major issue' is in bold red text. The definitions are in black text. The footer contains the logos for IIT Kharagpur and NPTEL, along with a small video inset of a woman in the bottom right corner.

One of the major issue is of course, plagiarism it is generally understood to be the appropriation of another person's ideas, processes, results or words without giving any proper credit. It is considered as a serious research misconduct it just does not apply to text, but also to graphics representations such as photographs, tables and charts as well.

(Refer Slide Time: 11:50)

**Continued**

Uncredited improper paraphrasing of pages or paragraphs

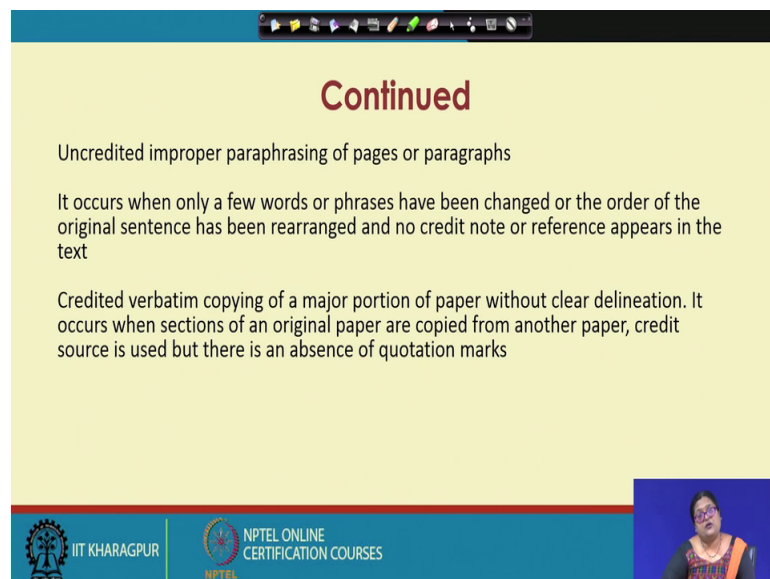

It occurs when only a few words or phrases have been changed or the order of the original sentence has been rearranged and no credit note or reference appears in the text

Credited verbatim copying of a major portion of paper without clear delineation. It occurs when sections of an original paper are copied from another paper, credit source is used but there is an absence of quotation marks

IIT KHARAGPUR | NPTEL ONLINE CERTIFICATION COURSES

What are the technical qualifications for plagiarism? This is very important which needs to be remembered uncredited verbatim copying of a full paper, uncredited verbatim copying of a large portion greater than 20 percent or up to 50 percent, uncredited verbatim copying of individual elements like paragraphs sentences or illustrations.

(Refer Slide Time: 12:24)

**Continued**

Uncredited improper paraphrasing of pages or paragraphs

It occurs when only a few words or phrases have been changed or the order of the original sentence has been rearranged and no credit note or reference appears in the text

Credited verbatim copying of a major portion of paper without clear delineation. It occurs when sections of an original paper are copied from another paper, credit source is used but there is an absence of quotation marks

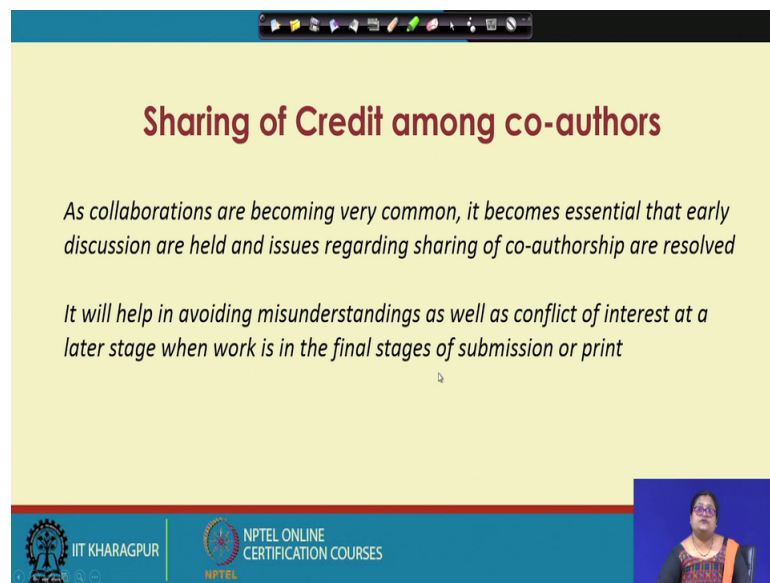

IIT KHARAGPUR | NPTEL ONLINE CERTIFICATION COURSES

Uncredited improper paraphrasing of pages or paragraphs, it occurs when only a few words or phrases have been changed or the order of the original sentence has been rearranged and no credit note or reference appears in the text, credited verbatim copying

of a major portion of paper without clear delineation. It occurs when sections of an original paper are copied from another paper, credit source is used, but there is an absence of quotation marks.

So, that original text and the new text gets merged together and like we are not able to find out like which is the contribution of the present author and what is the contribution of the earlier author who has been referred.

(Refer Slide Time: 13:27)

**Sharing of Credit among co-authors**

*As collaborations are becoming very common, it becomes essential that early discussion are held and issues regarding sharing of co-authorship are resolved*

*It will help in avoiding misunderstandings as well as conflict of interest at a later stage when work is in the final stages of submission or print*

IIT KHARAGPUR | NPTEL ONLINE CERTIFICATION COURSES

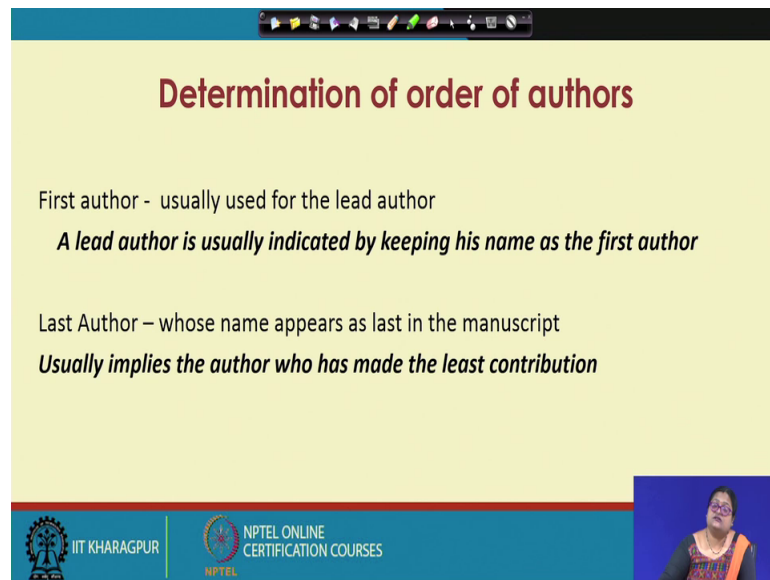

NPTEL

The slide features a yellow background with a blue header and footer. A small video inset in the bottom right corner shows a woman speaking. The footer contains the logos for IIT Khharagpur and NPTEL Online Certification Courses.

So, because there is no credit given by putting of like the either in terms of apostrophes or brackets so, that we can understand this portion is by the original author or quotations.

So, how do we share credit amongst coauthors; as collaborations are becoming very common, it becomes essential that early discussion are held and issues regarding sharing co authorship are resolved. It will help in avoiding misunderstandings as well as conflict of interest at a later stage so, when it is in the submission or in a print state.

(Refer Slide Time: 14:12)

**Determination of order of authors**

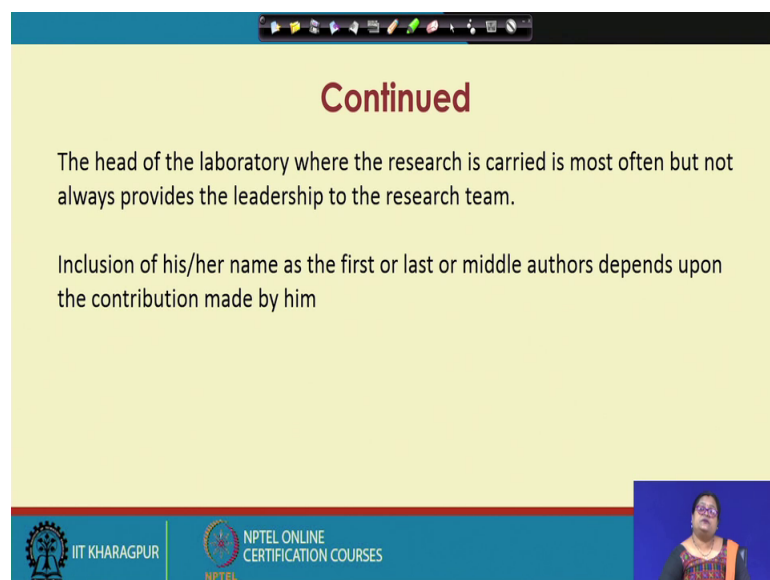

First author - usually used for the lead author  
*A lead author is usually indicated by keeping his name as the first author*

Last Author – whose name appears as last in the manuscript  
*Usually implies the author who has made the least contribution*

IIT KHARAGPUR | NPTEL ONLINE CERTIFICATION COURSES

So, what are the things which will be a some like final issues will be the determination of the order of authors so, how do you determine is? First author is usually the lead author the lead author is usually indicated by keeping his name as the first author. Last author whose name appears as last in the manuscript usually implies the author who has made the least contribution so, it is in order of importance sort of.

(Refer Slide Time: 14:47)

**Continued**

The head of the laboratory where the research is carried is most often but not always provides the leadership to the research team.

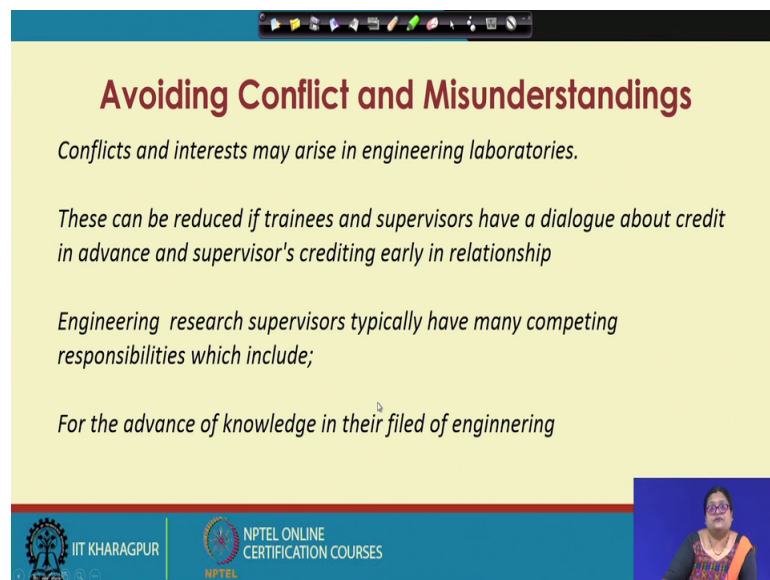

Inclusion of his/her name as the first or last or middle authors depends upon the contribution made by him

IIT KHARAGPUR | NPTEL ONLINE CERTIFICATION COURSES

The head of the laboratory where the research is carried out is most often, but not always provides the leadership to the research team. Inclusion of his or her name in as the first

last or middle authors depends upon the contribution made by him. So, what person could be the head of the laboratory, but by crediting the person for authorship we need to understand the contribution made by that person directly into the research and amount of contribution made.

(Refer Slide Time: 15:26)

**Avoiding Conflict and Misunderstandings**

*Conflicts and interests may arise in engineering laboratories.*

*These can be reduced if trainees and supervisors have a dialogue about credit in advance and supervisor's crediting early in relationship*

*Engineering research supervisors typically have many competing responsibilities which include;*

*For the advance of knowledge in their field of engineering*

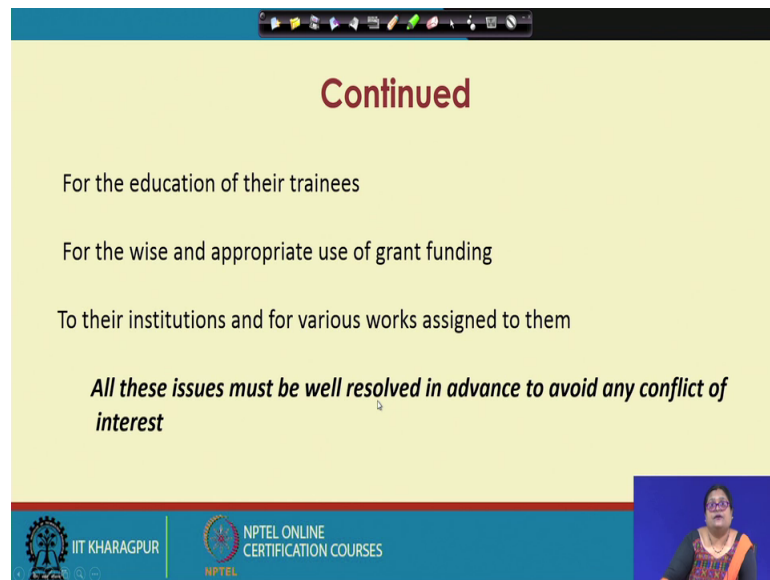

IIT KHARAGPUR | NPTEL ONLINE CERTIFICATION COURSES

NPTEL

A small video inset in the bottom right corner shows a woman with glasses and a patterned top speaking.

So, what can be done to avoid conflict and misunderstandings so, conflicts and interests may arise in engineering laboratories, these can be reduced if trainees and supervisors have a dialogue between credit between themselves about credit in advance and supervisors crediting early in relationship. Engineering research supervisors typically have many competing responsibilities which include; like the for the advance of knowledge in their field for engineering, then for the educational their trainees for the wise and appropriate use of grant funding for their institutions and various works assigned to them.

(Refer Slide Time: 16:13)

**Continued**

For the education of their trainees

For the wise and appropriate use of grant funding

To their institutions and for various works assigned to them

***All these issues must be well resolved in advance to avoid any conflict of interest***

IIT KHARAGPUR | NPTEL ONLINE CERTIFICATION COURSES

So, because they have so, many of different assigned roles and interests. So, to avoid any conflict from issues may be resolved were in advance. So, these are the some of the important points which we need to understand as a part of like engineering is today it is not only about just practices. But it is also disseminating your knowledge to the outside world to the other people, who are working on the same domain and sharing of your findings with each other.

So, when this knowledge sharing is happening, when this knowledge transfer is happening, issues related to these authorship issues related to plagiarism, issues related to data collection and reporting of results becomes important. And if we keep in mind the discussion of today then, it is definitely going to help us to avoid unethical practices and maintain the research integrity.

Thank you.
