Lecture - 11
Bid - Rigging

Dear students, we already talked about cartelization-one of the anti competitive practice, and in this class we are going to talk about Bid Rigging. You may have heard about bid rigging. Presently all the government purchases or other purchases use online bidding.

(Refer Slide Time: 00:37)

BID - RIGGING

“Bid-Rigging” means any agreement, between enterprises or persons engaged in identical or similar production or trading of goods or provision of services, which has the effect of eliminating or reducing competition.

Forms of Bid-rigging

- Bid suppression- refrain from bidding
- Complementary or Cover bidding- submit bids too high or with unacceptable terms.
- Bid Rotation- competitors agree to take turns being the lowest bidder.
- Sub-Contracting- colluding Competitors receive sub-contracts from successful bidder.

  ©KDR/RGSOIPL/NPTEL-2019 45

Bid rigging is again considered to be anti-competitive in nature; and we will see How it is anti-competitive? Why it is anti-competitive in nature? And what is the purpose of these bidding? The purpose of bidding is to get best prices. You purchase on best prices and that is why bidding is required so that different producers can offer different prices for the similar goods which you want to purchase. And the bid rigging, the entire bid rigging process vitiates the entire process of these bidding itself. The bid rigging means that, any agreement between enterprises or persons engaged in identical or similar production or trading of goods of provision of services which has the effect of eliminating or reducing competition.

So ultimately, bid rigging has a direct impact on eliminating competition or reducing competition in the market and is considered as anti-competitive in nature. And there are different forms of bid rigging i.e. one is bid separation i.e. all the people are refrained from bidding so that any one of them can bid for the same. And Secondly, complementary or cover bidding in which you are submitting bids at too high prices with unacceptable terms. So that, you go to the negotiating table and negotiate with them and fix the prices.

And thirdly bid rotation where competitors agree to take turn, one by one as the lowest bidder. So, this time I will be the lowest bidder the next time you will be the lowest bidder; there is an arrangement like cartel, there is an arrangement between the suppliers for supplying the lowest bid. Then subcontracting, i.e. there is a collusion between the competitors and they get sub-contracts from the successful bidder. So, you go for the bidding and we will also get a pi of the entire cake that is subcontracting. And all these are considered to be pernicious to the market and also to the price of it.

(Refer Slide Time: 03:19)

What is bid rigging?

The explanation to sub-section (3) of Section 3, of the Act defines

“bid rigging” as “any agreement, between enterprises or persons referred to in sub-section (3) engaged in identical or similar production or trading of goods or provision of services, which has the effect of eliminating or reducing competition for bids or adversely affecting or manipulating the process for bidding.”

The slide features the IIT Bombay logo on the left, the NPTEL logo in the center, and a small video inset of a man in a light blue shirt on the right. The copyright notice at the bottom reads ©KDR/RGSOIPL/NPTEL-2019.

And bid rigging is explained in section 3 of the Act, it is defined as any agreement between enterprises or persons referred to in sub-section 3 engaged in identical or similar production or trading of goods; provision of services which has the effect of eliminating or reducing competition for bids or adversely affecting or manipulating the process of

bidding. So, the definition simply says that it is an arrangement between a group of people for fixing the prices.

(Refer Slide Time: 03:57)

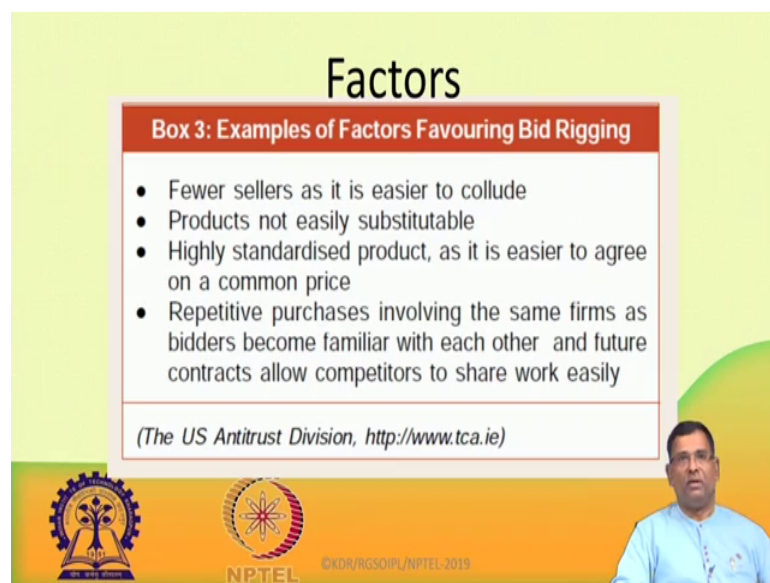

Bid rigging

- Collusive tendering or bid rigging is the practice whereby firms agree amongst themselves to collaborate the response of a tenderer.
- Re Aluminium Phosphide Tablets Manufacturers (suo motu case) No.2/2011 decided in 2012.

©KDR/RGSOIPL/NPTEL-2019

So, bid rigging or collusive tendering is the practice where the firms agree amongst themselves to collaborate or co-operate with each other for the tender. So, you can see that again like cartel there is a collaboration or agreement between the participants of the bid. We are not going to the cases.

(Refer Slide Time: 04:25)

Factors

Box 3: Examples of Factors Favouring Bid Rigging

- Fewer sellers as it is easier to collude
- Products not easily substitutable
- Highly standardised product, as it is easier to agree on a common price
- Repetitive purchases involving the same firms as bidders become familiar with each other and future contracts allow competitors to share work easily

(The US Antitrust Division, <http://www.tca.ie>)

©KDR/RGSOIPL/NPTEL-2019

And some of the factors are mentioned by the US Antitrust Division very clearly i.e. fewer sellers as it is easier to collude, if you know few number of sellers then it is easier to collude in bid rigging. And then if the products are not so easily substitutable they can rig the bid. Then highly standardised product easier to agree on a common price. Then again repetitive purchases involving the same firms as bidders, they become familiar with each other and in future contracts allow competitors to share work easily. So, these are some of the examples of factors favouring bid rigging, favourable to the bid riggers.

(Refer Slide Time: 05:07)

Box 5: Illustrations of Indicators

- The same company always wins a particular procurement contract.
- The same suppliers submit bids and each company seems to take turns at being the successful bidder.
- Some bids are much higher than published price lists, previous bids by the same firms, or engineering cost estimates.
- Bid prices drop whenever a new or infrequent bidder submits a bid.
- A successful bidder subcontracts work to competitors that submitted unsuccessful bids on the same project.
- There are irregularities (e.g., identical calculations or spelling errors) or similar handwriting, typeface, or stationery in the proposals or bid forms submitted by different vendors (indicating that the lowest bidder may have prepared some or all of the bids of the losing vendors).

It is to be noted that while these indicators may arouse suspicion of collusion they cannot be considered as proof of collusion.

(US Antitrust Division, <http://www.jftc.com>, <http://www.tca.ie>, <http://www.usdoj.gov>)

The slide also features logos for IIT Bombay and NPTEL, and a copyright notice: ©KDR/RGSOIPL/NPTEL-2019. A small inset image of a man in a blue shirt is visible in the bottom right corner of the slide.

Again the US Antitrust division has set some illustrative indication of this. So, the same company always wins a particular procurement contract, then they can go for rotation or they can go for subcontracting and the same suppliers submit bid on each company seems to have taken turns.

We talked about this that they take turns. And then on the higher prices from time to time. Then, the bid prices drop whenever a new infrequent bidders submits a bid, so that they can eliminate that new bidder and they can continue with the bid rigging process.

And then there are irregularities for example, identical calculation or spelling errors, handwriting. But now you see computer is used. So, there is no question of identical

handwriting but the same kind of forms used, all these give a suspicion on the bid rigging. These are the evidences of bid rigging to look upon.

(Refer Slide Time: 06:19)

HOW BID RIGGING TAKES PLACE

Bid-rigging occurs when bidders agree among themselves to eliminate competition in the procurement process leading to higher prices and denial of fair price. It takes place:-

- When a competitor agrees to submit a non-competitive bid that is too high to be accepted or contains terms that are unacceptable to the buyer.
- A competitor agrees not to bid or to withdraw a bid from consideration.
- A competitor agrees to submit bids only in certain geographic areas or only to certain public organizations.
- Although the schemes used by firms to rig bids vary, they all have one thing in common – the bidders agree to eliminate competition so that prices are higher and the government pays more.
- It is a type of cartel, where contract is pre-determined to one party even though several other parties also present a bid.
- It is illegal in most countries as a form of price fixing and market allocation.
- Collusion between firms in a procurement setting is in which bids are submitted to keep bid amount at a pre determined level.

The slide also features the logos of IIT Bombay and NPTEL, and a video feed of a presenter in a light blue shirt.

How the process of bid rigging takes place? The bid rigging are always an agreement between a group of bidders to eliminate competition in the procurement, the entire procurement process of any goods. And to ultimately fix the prices, so definitely the prices will be going high because then only they can make the maximum profit.

So, one competitor submits the bid and the another one agrees to submit a non-competitive bid which is too high or which is unacceptable to the buyer. Then competitor agrees not to bid or to withdraw a bid from the consideration and this is also part of a bid rigging.

Then the competitors agree to submit bids only in certain geographical areas or only to certain public organizations so that they can divide the public organisations. You submit in these public organizations and I will submit on these public organizations. They divide amongst themselves these particular organizations so that they can always fix the prices. They have one thing in common: the bidders agree to eliminate competition and fix the prices these are the two conditions which is always present in any kind of bid rigging.

It is illegal in most of the countries. The price fixing and market allocation is illegal in almost all the jurisdictions. And the collusion of firms in procurement and bidding is always in a predetermined level and they collude with each other.

(Refer Slide Time: 08:05)

Forms of bid rigging

- **Bid rigging may take many forms, but most bid rigging conspiracies usually fall into one or more of the following categories:**
 - **Bid Suppression**
 - **In bid suppression schemes, one or more competitors who otherwise would be expected to bid, or who have previously bid, agree to refrain from bidding or withdraw a previously submitted bid so that the designated winning competitor's bid will be accepted.**

The slide features a green header with the title, a white content area with a green border, and a yellow footer. The footer contains the logos of IIT Bombay and NPTEL, along with the text '©KDR/RGSOIPL/NPTEL-2019'. A small video inset of a man in a light blue shirt is visible in the bottom right corner of the slide.

If you look into the forms of bid rigging, you can see the bidding may take in different forms, they may be bid suppression. Bid suppression schemes include one or two bidders who are supposed to submit their bid or have previously bided and who has the most chance of getting the bid, he agrees to the refrain from the bidding or withdraws from previously submitted bid so that the designated winning competitor's bid will be accepted so that means, even though the lowest bid is submitted, later on they can come to an agreement that the other person will withdraw from the bidding process so that a particular bidder can get the bid in his favour and so that they can fix the prices.

(Refer Slide Time: 08:55)

Complementary Bidding

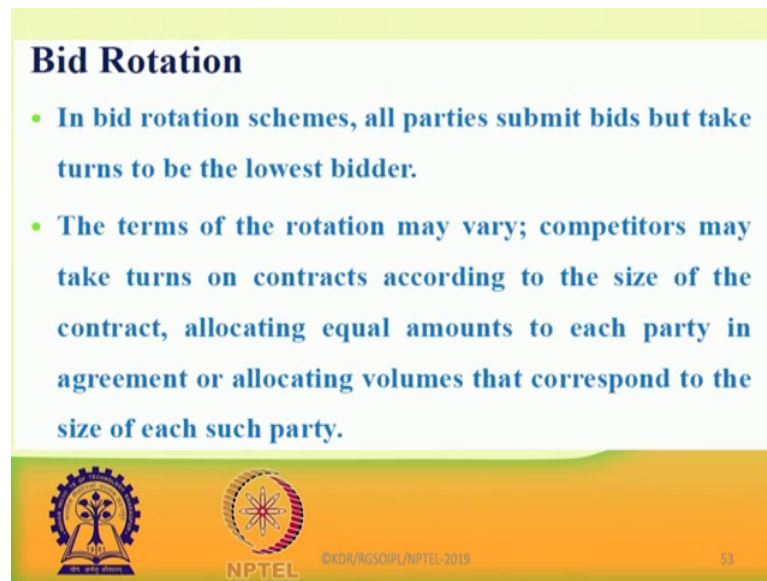

- Complementary bidding (‘cover’ or ‘courtesy’ bidding) occurs when some competitors agree to submit bids that are either too high to be accepted or contain special terms that will not be acceptable to the buyer. Such bids are not intended to secure the buyer’s acceptance, but are merely designed to give the appearance of genuine competitive bidding.
- Complementary biddings are the most frequently occurring forms of bid rigging, and the bidders defraud purchasers by creating the appearance of competition to conceal secretly inflated prices.

 ©KDR/RGSOIPL/NPTEL-2019 52

The second category is the complementary bidding, and complementary bidding is for cover up, it is courtesy bidding. It is to cover up the main bid; that means the competitors agree to submit bids, but actually there is no competitor. Because, even though he submit the bids, he will put very high prices which would not be acceptable to the buyer. It is not a genuine bidding. So, the complimentary bidding is not going to be genuine at all, it is always going to be very high prices, which are not acceptable to the purchaser.

This is one of the most common type of rigging, because it seems to be that there are bidders but actually these are bid rigging and so they can defraud the purchasers by putting, creating various barriers to the competition and inflate the prices. So simply there is a group of bidders but there is actually one designated bidder because of these complimentary bidding or bid rigging.

(Refer Slide Time: 10:11)

Bid Rotation

- In bid rotation schemes, all parties submit bids but take turns to be the lowest bidder.
- The terms of the rotation may vary; competitors may take turns on contracts according to the size of the contract, allocating equal amounts to each party in agreement or allocating volumes that correspond to the size of each such party.

  ©KDR/RGSOIPL/NPTEL-2019 53

And then bid rotation which I already talked about. In rotational schemes all parties participate in the bid, but always the lowest bidder will be the designated person. So, that the next time another person can be given on rotation basis. The objective is very clear, it is fixed whom to be given the bidding, who is going to be the bidder and also to fix the prices.

(Refer Slide Time: 10:43)

Market Allocation

- Agreements by which competitors divide markets among themselves.
- Division could be by territory, by customer type or by Product. For example;
- Company A only submits bids for north;
- Company B only submits bids for south ;

  ©KDR/RGSOIPL/NPTEL-2019 

Then another form is the market allocation. The market allocation can be territorial allocation or a particular market allocation. So, for example, the entire market is divided into maybe south, north and east and west. And one company is designated for one region and another company is designated for another region. And market allocation is also considered to be a bid rigging process.

(Refer Slide Time: 11:17)

MARKET ALLOCATION

- Market Allocation refers to agreements between competitors that divide up the market so that the participants are sheltered from competition
- Such agreement could follow
 - I. Non production of goods in competition each other
 - II. Not selling in each other's allocated geographic territories; or
 - III. Not soliciting or sell to each other's existing customers

  ©KDR/RGSOIPL/NPTEL 2019

And market allocation can happen. Basically it is sheltering from competition. Because, in this particular market I have various kind of advantage so you do not bid in this, you give me this particular region and you operate in that another region.

So, he may not have any production of goods in that particular area. And also he is not going to sell that particular product in other particular geographical territories and not soliciting or selling to the existing customers of each other, not to disturb the customers by the competitors. So, there is an agreement amongst the suppliers not to disturb the market, not to disturb the regionality, not to disturb the existing customers and this is known as market allocation.

(Refer Slide Time: 12:07)

OUTPUT CONTROL/LIMITING PRODUCTION

- Output controls can occur in the form of production or sales quota arrangements between competitors to limit the volume or type of particular goods or services available on the market
- Such kind of agreements are made to limit supply and gain the ability to raise prices and such sort of agreements are treated illegal *per se*

The slide features a green and yellow background with a white wavy line at the bottom. It includes the logos of the Indian Institute of Technology (IIT) and NPTEL, along with the text '©KDR/RGSOIPL/NPTEL-2019'. A small inset image of a man in a light blue shirt is visible in the bottom right corner.

And market allocation is also considered to be, it is a part of bid rigging. Then another form is the output control and limiting production, absolutely considered to be illegal as per the *per se rule*.

(Refer Slide Time: 12:25)

JOINT VENTURE

- While certain horizontal agreements have been presumed to harm competition, an exemption from this presumption is offered to an efficiency-enhancing joint venture
- The burden of demonstrating such efficiencies lies with the enterprise seeking the exemption
- If the efficiency gain is shown to exceed the harm to competition, the party is not likely to be held to be in contravention of the anticompetitive behaviour on an application of the rule of reason

The slide features a green and yellow background with a white wavy line at the bottom. It includes the logos of the Indian Institute of Technology (IIT) and NPTEL, along with the text '©KDR/RGSOIPL/NPTEL-2019'. A small inset image of a man in a light blue shirt is visible in the bottom right corner.

The exemptions you can find is joint ventures. And all horizontal agreements are considered *per se* to be a harm to the competition and illegal. So, the exemption is offered to one category of association that is known as joint venture in order to enhance

efficiency. But, this is not an exception actually and they have to show certain advantages to the society and benefits to the society, ultimately benefits to the consumers then only these exemption will be applicable.

So if the enterprise can show certain advantages, then only it will be exempted from this kind of anti-competitive practices.

(Refer Slide Time: 13:21)

**AGREEMENTS RELATING TO
INTELLECTUAL PROPERTY RIGHTS**

- The Competition Act provides a limited defence to agreement relating to intellectual property rights under section 3
- Wherein a person shall be free to impose restrictions insofar as the restrictions imposed are reasonable, and for the protection of, and prevention of any infringements of, any intellectual property rights granted under India's intellectual property laws

The slide features a light green background with a yellow-to-green gradient at the bottom. On the left, there is a logo of the Indian Institute of Management (IIM) Ahmedabad. In the center, there is the NPTEL logo. On the right, there is a small portrait of a man in a light blue shirt. At the bottom right, there is a copyright notice: ©KDR/RGSOIP/NPTEL-2019.

Then, usually intellectual property protection, which we will discuss when we discuss about intellectual property versus competition, under section 3 is exempted from the competition provisions.

(Refer Slide Time: 13:35)

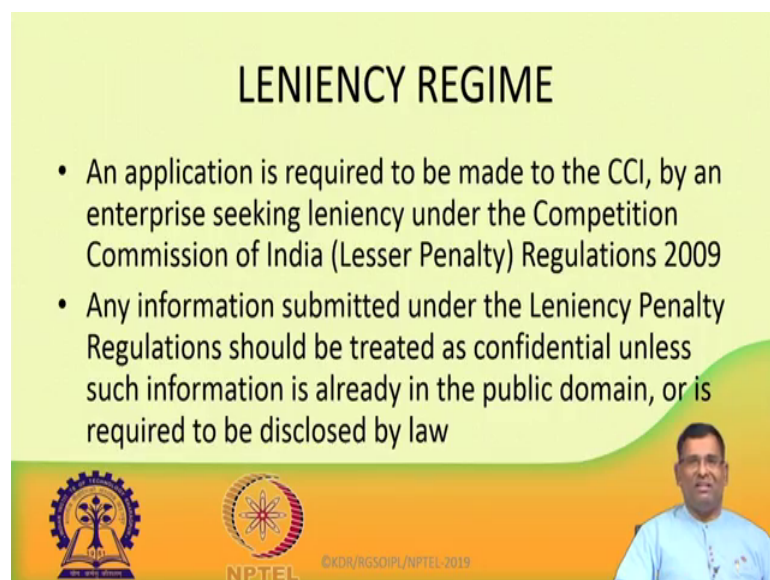

EXPORT CARTELS EXEMPTION

- The Act provides that restrictions relating to anticompetitive agreements, including cartels, do not apply to the right of any person to export goods from India to the extent that the agreements relate exclusively to production, supply, distribution or control of goods or provision of services

The slide features a green and yellow background. At the bottom, there are logos for the Indian Institute of Technology (IIT) and NPTEL, along with the text '©KDR/RGSOIPL/NPTEL-2019'. A small video inset of a man in a light blue shirt is visible in the bottom right corner.

And export cartel exemptions; so, here again the Act provides restrictions relating to anti-competitive agreement cartels. So, in the case of exporting goods from India the agreements relate exclusively to production supply, distribution and other things; because, other countries will take care of the competition issues in their markets.

(Refer Slide Time: 13:55)

LENIENCY REGIME

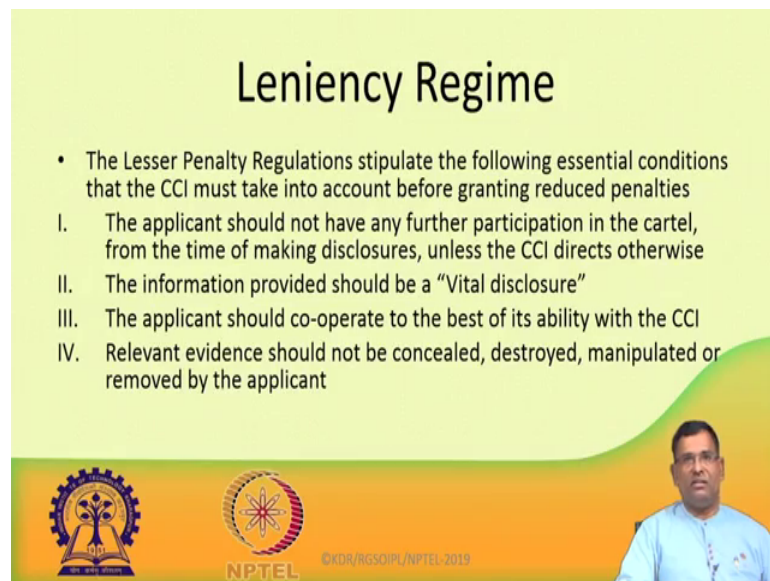

- An application is required to be made to the CCI, by an enterprise seeking leniency under the Competition Commission of India (Lesser Penalty) Regulations 2009
- Any information submitted under the Leniency Penalty Regulations should be treated as confidential unless such information is already in the public domain, or is required to be disclosed by law

The slide features a green and yellow background. At the bottom, there are logos for the Indian Institute of Technology (IIT) and NPTEL, along with the text '©KDR/RGSOIPL/NPTEL-2019'. A small video inset of a man in a light blue shirt is visible in the bottom right corner.

And the leniency regime: there is a prohibition in the Indian Act. The CCI provides leniency regime for the enterprises. This is nothing but that the competition commission

imposes a lesser penalty, based on the regulations in 2009, for those who co-operate and those who share confidential information and data to the competition commission. According to this provision any one of these cartel participant can co-operate with the competition commission of India and provide information. So, they will be punished less under these leniency regime or leniency regulations of 2009.

(Refer Slide Time: 14:37)

The slide is titled "Leniency Regime" and lists the following conditions:

- The Lesser Penalty Regulations stipulate the following essential conditions that the CCI must take into account before granting reduced penalties
 - I. The applicant should not have any further participation in the cartel, from the time of making disclosures, unless the CCI directs otherwise
 - II. The information provided should be a "Vital disclosure"
 - III. The applicant should co-operate to the best of its ability with the CCI
 - IV. Relevant evidence should not be concealed, destroyed, manipulated or removed by the applicant

The slide also features the logos of IIT Bombay and NPTEL, and a small video inset of a man in a light blue shirt.

In the leniency regime, the applicant should not have any further participation, that means certain conditions to be fulfilled for participating in this particular program. They should not be any more with the cartel and the second condition is that the information provided by the member of the cartel should be vital disclosure. And thirdly, the applicant should completely cooperate to the fullest extent with the Competition Commission of India.

And the relevant evidences should not be concealed, destroyed or manipulated nor removed by the applicant after they participate in the leniency program. If all these conditions are fulfilled, they can participate in this program and get a lesser penalty when compared to the other participants in the cartel program.

So, in this particular class I tried to explain what is bid rigging as another common anti-competitive practice. First we discussed about cartelization, different cartelization, this

class is on various forms of bid rigging in a common form, which are adopted by the business enterprises.

Ultimately the purpose of bid rigging is to fix the grant of bid as well as fix the market, fix the prices based on markets, regionality and other conditions. So, this will always affect the market and ultimately it is harmful to competition, it is harmful to the consumer interest. So, it is anti-competitive in nature. And so, the anti-competitive agreements which we discussed is complete. And in the next classes we will go to the abuse of dominant position and other activities which are prohibited under the Competition Act.

Thank you.
