Indian Institute of Technology, Kharagpur

Lecture - 24
Enforcement of anti-Trust Law in United States

Dear students, today we are going to discuss the Enforcement of the Anti-Trust Law vis-a-vis IP Law in the United States. In the last classes, we were discussing the entire provisions and implementation of the Anti-Trust Law vis-a-vis intellectual property law in the United States.

(Refer Slide Time: 00:46)

And today, specifically we are going to discuss the various agencies involved in the implementation of the intellectual property law as well as the competition law. There is a Department of Justice(DoJ), there is a Federal Trade Commission(FTC) and there are various programs to implement the Anti-Trust Law and different areas of enforcement which we will be discussing.

(Refer Slide Time: 01:08)

The slide features a light green background with a white title 'Antitrust Laws' centered at the top. Below the title, there are three bullet points. The bottom of the slide has a decorative orange and yellow gradient bar containing three logos: a gear-like emblem on the left, the NPTEL logo in the center, and a small copyright notice on the right.

Antitrust Laws

- The goal of the antitrust laws is to protect economic freedom and opportunity by promoting free and fair competition in the marketplace.
- Competition in a free market benefits American consumers through lower prices, better quality and greater choice.
- Competition provides businesses the opportunity to compete on price and quality, in an open market and on a level playing field, unhampered by anticompetitive restraints.

  © IITM/BCCOPL/NPTEL 2018

What is the objective of anti-trust law? Anti-Trust Law is specifically to protect the economic freedom of the market as well as to promote competition in the market and there must be free and fair trade, or free and fair competition in the marketplace. This is the objective of the anti-trust law.

The ultimate objective of the competition in the free market is to enable the entire market for consumer welfare. And this will enable to lower the prices, better the quality, better the consumer choice and will also lead to the welfare of the consumers ultimately. And moreover, it provides business opportunities for the new entrants to compete in quality, in price. In an open market, there must be a level playing field in the market for the new entrants.

So, if there is no competition in the market, if there is only monopolies or oligopolies in the market, the market is going to be distorted. These anti-competitive restraints restrict new entrants. There must be competition in the market.

(Refer Slide Time: 02:42)

Provisions

- Section 1 of the Sherman Act, 15 U.S.C. § 1
 - Prohibits contracts, combinations and conspiracies in restraint of trade.
 - Sherman Act to only prohibit "unreasonable" restraints of trade. Determining what is unreasonable typically is a complex, granular exercise deeply impacted by economic analysis.
 - Certain agreements, however, are *per se* illegal without any further analysis.
 - It is generally *per se* illegal when competitors engage in price fixing, division of markets, bid rigging or group exclusions.

© IIT Bombay, NPTEL 2019

If you look into the provisions of the Sherman Act which we have already covered, Section 1 of the Sherman Act prohibits contracts, combinations and conspiracies in restraint of trade. And also it restrains and prohibits unreasonable restraint of trade which impacts the economy, affects the economy of the United States.

And thirdly we can see the agreements. A certain category of agreements such as business agreements is held to be *per se* illegal, without any further analysis. There is a presumption in favour of the *per se* illegal rule. When the competitors engage in price-fixing, division of markets including vertical as well as horizontal markets, bid rigging, group exclusions etcetera it becomes *per se* illegal. So, Section 1 prohibits these combinations and conspiracies to restrain trade.

(Refer Slide Time: 03:50)

The slide is titled "Penalties" and is set against a light green background with a wavy bottom edge. It contains two main bullet points: "Criminal Penalties" and "Civil Penalties". Under "Criminal Penalties", there are three sub-bullets: "Up to 10 years in prison for individuals", "Criminal fines of up to \$100 Million for corporations or twice the loss/gain from the violation (whichever is greater)", and "Criminal fines of up to \$1 Million for individuals or twice the loss/gain from the violation (whichever is greater)". Under "Civil Penalties", there are three sub-bullets: "Treble damages available to a successful plaintiff", "Payment of the plaintiffs attorneys' fees and costs (on top of your own attorneys' fees)", and "Joint and several liability." In the bottom right corner of the slide, there is a small portrait of a man in a white shirt. At the bottom of the slide, there are three logos: the Indian National Emblem on the left, the NPTEL logo in the center, and a small copyright notice "© IITM/IGCC/PL/NPTEL 2019" on the right.

Penalties

- Criminal Penalties
 - Up to 10 years in prison for individuals
 - Criminal fines of up to \$100 Million for corporations or twice the loss/gain from the violation (whichever is greater)
 - Criminal fines of up to \$1 Million for individuals or twice the loss/gain from the violation (whichever is greater)
- Civil Penalties
 - Treble damages available to a successful plaintiff
 - Payment of the plaintiffs attorneys' fees and costs (on top of your own attorneys' fees)
 - Joint and several liability.

If you look into the penalties which are imposed, there are criminal penalties as well as civil penalties. And the United States is one of those countries where criminal penalties were imposed and if one is in violation of these prohibitions, the Sherman Act will attract 10 years of imprisonment for individuals. This is very harsh punishment which is imposed under the Sherman Act.

If you look into India, you can find that there is no jail time, there are no criminal penalties which are provided in the Competition Act. There (in the United States) the fine is also very huge amount. The criminal fines are up to 100 million for corporations or twice the loss or gain from the violation, whichever is greater in quantity.

In the case of an individual, criminal fines can be up to 1 million or twice the loss or gain of the violation, whichever is greater and will be imposed as criminal penalties. If you look into the civil penalties, then we can see that there are treble damages available to the successful plaintiff which includes the attorney fees and the cost of litigation and there are several joint liabilities imposed on the defendants in case of civil penalties.

(Refer Slide Time: 05:27)

The slide features a light green background with a white title 'Enforcement' at the top center. Below the title is a bulleted list of four groups. The bottom of the slide has a decorative orange and yellow gradient bar containing three logos: the Indian Institute of Technology (IIT) logo on the left, the NPTEL logo in the center, and a portrait of a man in a white shirt on the right. The text '© IIT Bombay, NPTEL 2019' is visible in small print at the bottom center.

Enforcement

- Enforcement of the antitrust laws is handled by four groups
 - a) The Department of Justice (DOJ), which is the law enforcement arm of the executive branch;
 - b) The Federal Trade Commission (FTC), an independent regulatory and administrative body created by Congress;
 - c) The individual attorneys general of the fifty states; and
 - d) Private (i.e., nongovernmental) civil litigants

The enforcement of antitrust law in the United States is by two agencies. The first one is the department of justice, which is the law enforcement arm of the executive branch and the second is the federal trade commission which is construed under the federal trade commission act, which is an independent regulatory authority created by the Congress.

The third category, which we see there are lot of individual attorneys, attorney generals, all over the states playing a role in enforcing the anti-trust law. The fourth category is that of the private persons and non-governmental organisations, civil litigants and others those who file cases against big companies, those who engage in anti-trust violations.

(Refer Slide Time: 06:19)

Enforcement

- Both the FTC and the U.S. Department of Justice (DOJ) Antitrust Division enforce the federal antitrust laws.
- In some respects their authorities overlap, but in practice the two agencies complement each other.
- Over the years, the agencies have developed expertise in particular industries or markets.

The slide features a green and yellow background with a white wave graphic on the right. At the bottom, there are logos for IIT Bombay, NPTEL, and a copyright notice for © IIT Bombay/NPTEL 2019. A small portrait of a man in a white shirt is visible in the bottom right corner.

If you look into both the agencies, both the agencies FTC and the department of justice, they work with each other, meaning that in some areas their works overlap with each other, but the two agencies complement each other. They will always try to see if there is overlapping of initiations by both the agencies. So, both the agencies are experts in certain areas or industries and markets and so, they cooperate with each other and transfer information, share information with each other, so that there is no overlapping of enforcement.

(Refer Slide Time: 06:59)

Enforcement

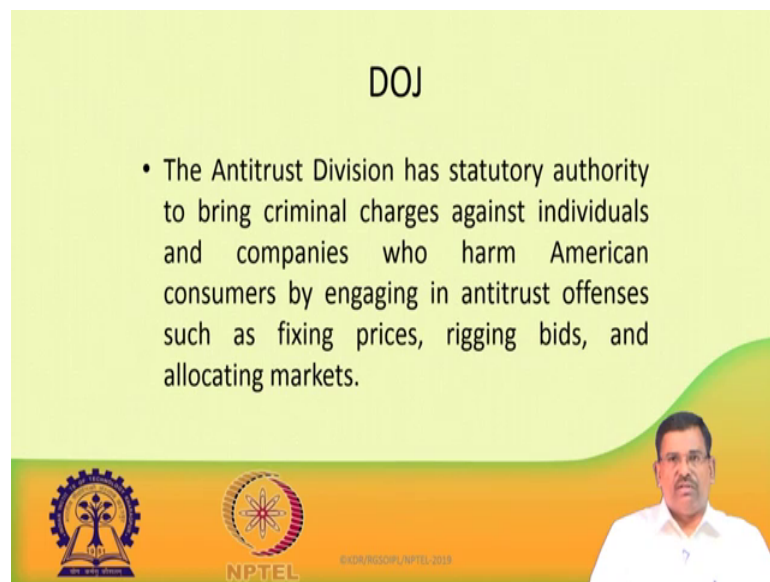

- FTC devotes most of its resources to certain segments of the economy, including those where consumer spending is high: health care, pharmaceuticals, professional services, food, energy, and certain high-tech industries like computer technology and Internet services. Before opening an investigation, the agencies consult with one another to avoid duplicating efforts.

The slide features a green and yellow background with a white wave graphic on the right. At the bottom, there are logos for IIT Bombay, NPTEL, and a copyright notice for © IIT Bombay/NPTEL 2019. A small portrait of a man in a white shirt is visible in the bottom right corner.

If you look into the FTC, the FTC is the independent regulatory authority which spends their resources in certain segments of the economy or they specialise in certain areas of the economy which is a lot of spending in the American market.

For example, the healthcare sector, like pharmaceuticals, professional services, food, energy, and high-tech industries, like the computer giants, internet services. So, this agency specialises in these areas and they consult with the department of justice before initiating any investigation in order to avoid duplication of their investigations.

(Refer Slide Time: 07:55)

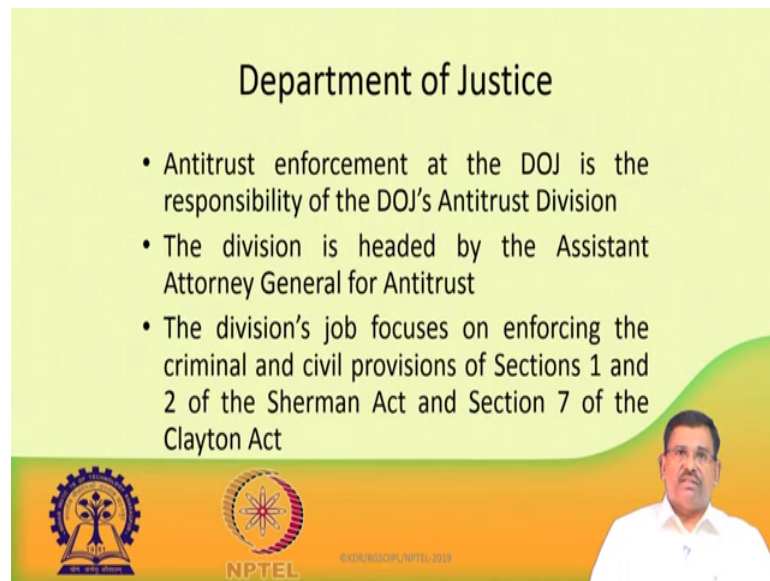

The slide features a light green background with a wavy orange and yellow border at the bottom. At the top center, the text "DOJ" is displayed in a bold, black, sans-serif font. Below this, a single bullet point reads: "• The Antitrust Division has statutory authority to bring criminal charges against individuals and companies who harm American consumers by engaging in antitrust offenses such as fixing prices, rigging bids, and allocating markets." In the bottom right corner, there is a small portrait of a man with glasses and a white shirt. The bottom left corner contains the IIT Bombay logo, and the bottom center features the NPTEL logo with the text "© IITB/RSOPL/NPTEL 2019" below it.

And on the other hand, in the department of justice there is a division on the anti-trust law. Those who bring criminal charges against individuals and companies, who harm American market or who harm the American consumers, like fixing prices or bid rigging allocating markets or tying or meddling other and other categories of offences, which we will discuss it later will be dealt by this department.

(Refer Slide Time: 08:28)

Department of Justice

- Antitrust enforcement at the DOJ is the responsibility of the DOJ's Antitrust Division
- The division is headed by the Assistant Attorney General for Antitrust
- The division's job focuses on enforcing the criminal and civil provisions of Sections 1 and 2 of the Sherman Act and Section 7 of the Clayton Act

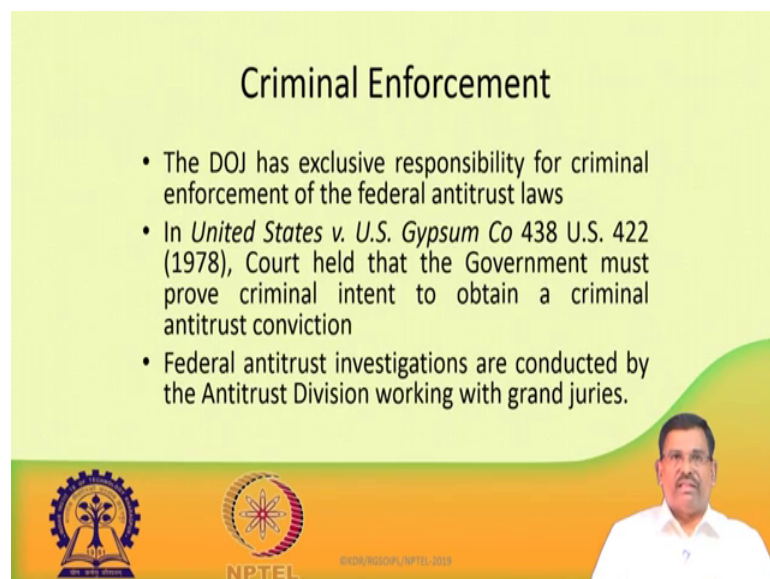

The slide features a light green background with a wavy orange and yellow border at the bottom. On the left, there are three logos: the Indian National Emblem, the NPTEL logo, and a small copyright notice. On the right, there is a portrait of a man in a white shirt and glasses.

The department of justice is headed by an assistant attorney general for anti-trust. They focus or they initiate civil and criminal provisions under Section 1 of the Sherman Act, Section 2 and Section 7 of the Clayton Act. They enforce these provisions virulently in the American market or in the company or with individuals who are violating the anti-trust provisions, they also initiate prosecution in the court.

(Refer Slide Time: 08:52)

Criminal Enforcement

- The DOJ has exclusive responsibility for criminal enforcement of the federal antitrust laws
- In *United States v. U.S. Gypsum Co* 438 U.S. 422 (1978), Court held that the Government must prove criminal intent to obtain a criminal antitrust conviction
- Federal antitrust investigations are conducted by the Antitrust Division working with grand juries.

The slide features a light green background with a wavy orange and yellow border at the bottom. On the left, there are three logos: the Indian National Emblem, the NPTEL logo, and a small copyright notice. On the right, there is a portrait of a man in a white shirt and glasses.

The department of justice is exclusively responsible for the criminal enforcement of federal antitrust laws. In some of the cases like *the United States versus US Gypsum*, the court held that the government must prove criminal intent to obtain a criminal anti-trust conviction. So, a greater quality or greater quantity of evidence or greater evidence is required to initiate the criminal investigations. The court said that, the criminal intent must be proved then only they can initiate the criminal action against the violation of the Sherman Act. They work in the jury system.

(Refer Slide Time: 09:56)

Lets look into the criminal enforcement in almost the last 10 years, the department of justice releases these data every year. We can see that the corporations have been less prosecuted than individuals and in almost every year for the last 10 years the individuals prosecuted are very high in number, in terms of the cases or charges levelled against individuals than the corporations.

It means that the corporations are either complying with the anti-trust law or the complaints against the American companies are very less. For example, in the year 2018 there are only 5 charges, i.e. only 5 corporations were charged with anti-trust violations. This is the case in most of the years, the number is approximately 20. It means that corporations are more complying with anti-trust provisions than individuals. So, it is very

clear that more individuals are involved in the violation of the anti-trust provisions in the United States.

(Refer Slide Time: 11:10)

The slide features a light green background with a wavy orange and yellow border at the bottom. The title 'Grand Jury' is centered at the top. Below it, there are two main bullet points, with the second one having two sub-points. At the bottom left, there are three logos: the Indian National Emblem, the NPTEL logo, and a small copyright notice. On the bottom right, there is a portrait of a man in a white shirt.

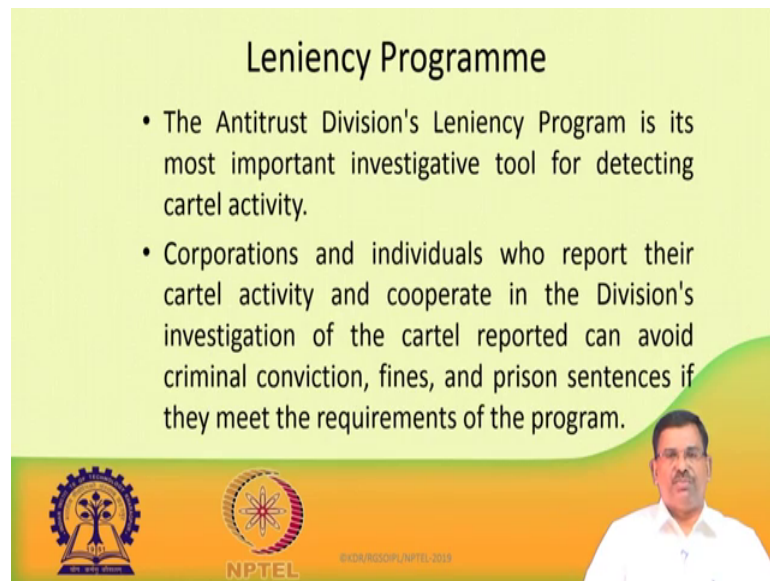

Grand Jury

- A grand jury is convened under the authority of a court and is run by a prosecutor
- The DOJ's Antitrust Division has adopted two programs designed to encourage the discovery and reporting of antitrust violations
 - a) Corporate Leniency Program
 - b) Individual Leniency Program

©KJUN/NSD/PL/NPTEL, 2013

Grand jury system prevails in the case of this act as well as the Sherman Act. The grand jury is convened under the authority of the court and is run by the prosecutor and then finally, they come to the conclusion. The department of justice runs two programs for settling disputes, settling disputes with corporations and settling dispute with individuals. And with corporations it is known as the *corporate leniency program* and with individuals it is known as the *individual leniency program*.

(Refer Slide Time: 12:01)

The slide features a light green background with a white wavy border at the bottom. The title 'Leniency Programme' is centered at the top. Below it are two bullet points. At the bottom, there are three logos: the Indian emblem on the left, the NPTEL logo in the center, and a portrait of a man on the right. A small copyright notice '© IIT Bombay/NPTEL 2019' is visible near the NPTEL logo.

Leniency Programme

- The Antitrust Division's Leniency Program is its most important investigative tool for detecting cartel activity.
- Corporations and individuals who report their cartel activity and cooperate in the Division's investigation of the cartel reported can avoid criminal conviction, fines, and prison sentences if they meet the requirements of the program.

© IIT Bombay/NPTEL 2019

These programs are to settle the disputes with a lenient mind. This program is applicable, to those who are co-operating with the investigation or those who voluntary come up and disclose anti-trust violations to the department of justice. It is basically to investigate, it is a tool, it is used as a tool for detecting cartel activities. The people those who are giving information will be considered leniently.

So, here the corporations and individuals those who report their anti-competitive activity to the department of justice and co-operate fully in the division's investigation of a cartel can avoid criminal conviction, fines, prison sentences, if they meet the requirements or preconditions of the program.

(Refer Slide Time: 13:10)

The slide features a light green background with a wavy orange and yellow border at the bottom. It contains the following text:

Corporate Leniency Program

- The Division has a policy of according leniency to corporations reporting their illegal antitrust activity at an early stage, if they meet certain conditions. "Leniency" means not charging such a firm criminally for the activity being reported.
- (The policy also is known as the corporate amnesty or corporate immunity policy.)

At the bottom of the slide, there are three logos: the Indian Institute of Technology (IIT) logo on the left, the NPTEL logo in the center, and a portrait of a man in a white shirt on the right. The text '© IITM/BCCOPL/NPTEL 2018' is visible in small print below the NPTEL logo.

If you look into this program you can see certain conditions. The leniency programs are available by the corporations as well as individuals. Their activity must be reported to the department of justice at an early stage. And it is must that the information must not be reported by anybody else, so they must be the first person to report that particular activity to the department of justice.

Only in these cases leniency will be shown to the informer along with report on others those who are doing this particular activity. Leniency will be shown to the people those who disclose or give information to the authorities. This policy is also known as *corporate amnesty* or *corporate immunity policy*. This is in line with the famous criminal jurisprudential system, those who give information on the commitment of crime will be leniently considered.

(Refer Slide Time: 14:19)

Corporate Leniency Program

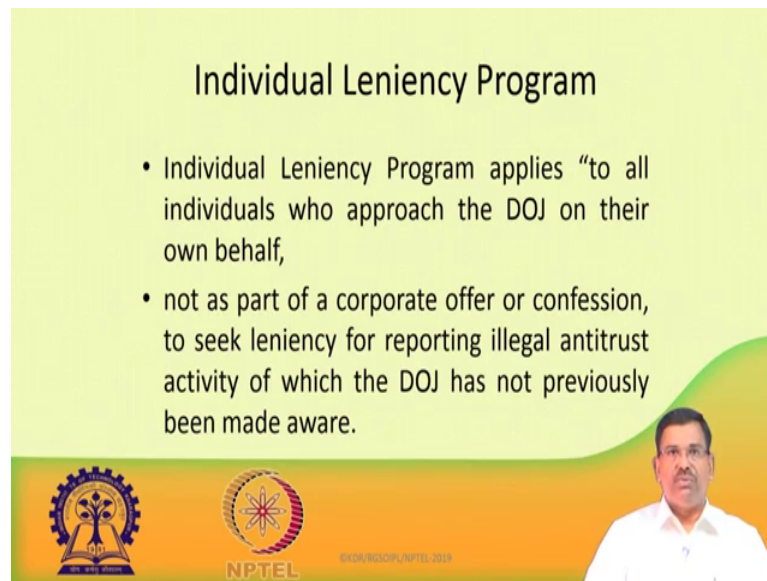

- Leniency will be granted to a corporation reporting illegal activity before an investigation has begun.
- The corporation, upon its discovery of the illegal activity being reported, took prompt and effective action to terminate its part in the activity.
- The confession of wrongdoing is truly a corporate act, as opposed to isolated confessions of individual executives or officials.

The slide features a light green background with a wavy bottom edge. At the bottom, there are three logos: the Indian Institute of Technology (IIT) logo on the left, the NPTEL logo in the center, and a small portrait of a man on the right. The text is in a black, sans-serif font.

Corporations reporting activity must do so before the investigation begins. Those who are giving information to the DoJ must do so before starting the investigation, not after the investigation has started, this is one of the conditions.

The corporations, upon the discovery of illegal activity being reported, must take prompt and effective action to terminate that part of activity. So, they must promptly terminate that particular activity and this confession of wrongdoing should be a truly corporate act, as opposed to the individual confessions by the executives and other officials of the company. These are some of the pre-conditions to come under the corporate leniency program.

(Refer Slide Time: 15:18)

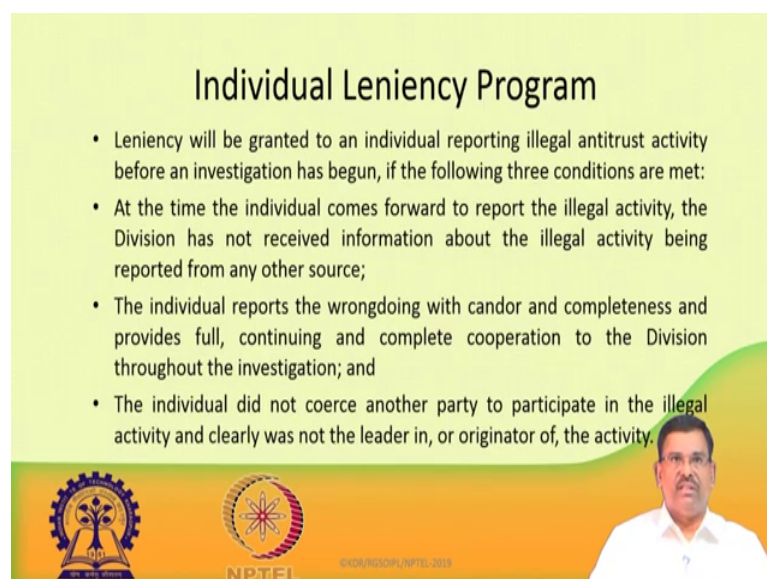

Individual Leniency Program

- Individual Leniency Program applies “to all individuals who approach the DOJ on their own behalf,
- not as part of a corporate offer or confession, to seek leniency for reporting illegal antitrust activity of which the DOJ has not previously been made aware.

The slide features a green and yellow background with a white wavy line. At the bottom, there are three logos: the Indian Institute of Technology (IIT) logo on the left, the NPTEL logo in the center, and a small portrait of a man on the right. The text is in a clean, sans-serif font.

The individual leniency program has been extended to the individual suspects. It applies to all the individuals who approach the department of justice on their own behalf to voluntarily disclose information to the department of justice. The conditions are: it must not be as a part of the corporate offer of confession to seek leniency in reporting anti-trust activity. This must not have been previously made aware of to the department of justice by anybody else. He should be the first person to report this particular matter to the department of justice.

(Refer Slide Time: 16:02)

Individual Leniency Program

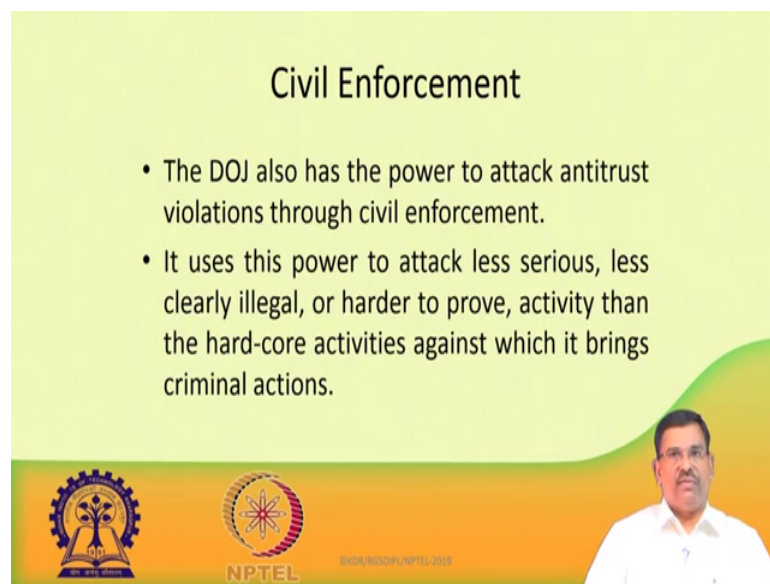

- Leniency will be granted to an individual reporting illegal antitrust activity before an investigation has begun, if the following three conditions are met:
- At the time the individual comes forward to report the illegal activity, the Division has not received information about the illegal activity being reported from any other source;
- The individual reports the wrongdoing with candor and completeness and provides full, continuing and complete cooperation to the Division throughout the investigation; and
- The individual did not coerce another party to participate in the illegal activity and clearly was not the leader in, or originator of, the activity.

This slide is similar to the first one but contains more detailed conditions. It includes the same logos and background design.

The other conditions are that the leniency will be granted to an individual, reporting illegal anti-trust activity before the investigation has begun. They must meet minimum three conditions. The first condition is that the individual comes forward to report the illegal activity, and the division has not already received the information about the illegal activity from any other source.

The second condition is the individual reports or wrongdoings, complete candour and completeness, provides full, continuing and complete co-operation to the department of justice, throughout the investigation. That is the second condition to avail this individual leniency program. Thirdly, the individual did not coerce another party to participate in the illegal activity and clearly was not the leader or originator of that particular activity. That is the third condition to avail the individual leniency program.

(Refer Slide Time: 17:25)

Civil Enforcement

- The DOJ also has the power to attack antitrust violations through civil enforcement.
- It uses this power to attack less serious, less clearly illegal, or harder to prove, activity than the hard-core activities against which it brings criminal actions.

The slide features a light green background with a wavy orange and yellow border at the bottom. On the left, there are two circular logos: the first is the Indian National Emblem with the motto 'Satyameva Jayate', and the second is the NPTEL logo. A small portrait of a man in a white shirt is visible in the bottom right corner. The text '© IIT KANPUR/NPTEL 2015' is printed in small letters at the bottom center.

When it comes to the civil enforcement, the department of justice has the power to attack anti-trust violation through civil enforcement as well, this is usually initiated in the case of less serious, clearly illegal or harder to prove activity than the hardcore activities. In the case of hardcore activities, criminal prosecutions will be initiated. The civil actions will be initiated against less severe activities.

(Refer Slide Time: 18:09)

The slide features a light green background with a wavy orange and yellow border at the bottom. The title 'Merger Enforcement' is centered at the top. Below it, two bullet points describe the shared responsibilities of the DOJ and FTC. At the bottom left, there are three logos: the Indian National Emblem, the NPTEL logo, and a small copyright notice. On the right side, there is a portrait of a man in a white shirt.

Merger Enforcement

- DOJ shares merger enforcement duties with the FTC (Federal Trade Commission).
- The two agencies divide responsibility for investigating proposed mergers, acquisitions, and joint ventures.

© IIT Bombay, NPTEL, 2019

The department of justice has enforced merger enforcements as well. The companies may merge, the companies may acquire another company, mergers and acquisitions along with joint ventures are not illegal per se. But the department of justice, the anti-trust division has the authority to look into each and every activity, each and every merger. Each and every merger of companies is not illegal.

But they can look into the activity whether it is for avoiding or whether it is for fixing the prices, whether it is for dividing the market or whether any other illegal anti-trust activity is taking place or not. Because the responsibility of investigation is shared between the federal trade commission and the department of justice.

(Refer Slide Time: 19:08)

Merger Enforcement

- The principal federal antitrust laws applicable to mergers are section 7 of the Clayton Act, section 1 of the Sherman Act, and section 5 of the Federal Trade Commission Act.
- Section 7 proscribes a merger the effects of which “may be substantially to lessen competition.”
- Section 1 prohibits an agreement that constitutes an unreasonable “restraint of trade.” Section 5, which the Federal Trade Commission enforces, proscribes “unfair methods of competition.”

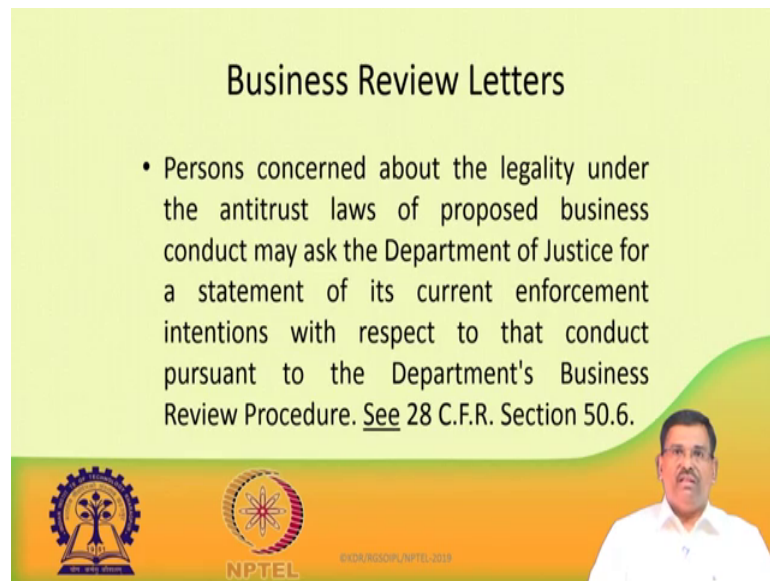

The slide features a light green background with a yellow-to-orange gradient at the bottom. On the left, there are two circular logos: the first is the Indian National Emblem, and the second is the NPTEL logo. On the right, there is a small portrait of a man in a white shirt. The text is centered and uses a sans-serif font.

So, if we look into the merger enforcement, we can see that, the major provisions which are applicable to mergers are Section 7 of the Clayton Act, Section 1 of the Sherman Act and Section 5 of the FTC Act.

Section 7 of the Clayton Act proscribes a merger the effect of which may be substantially to lessen competition. The per se rule is not applicable here, the rule of reason is applicable here. So, if the merger is for substantially lessening competition in the market, then the competition authorities or the anti-trust authorities, the department of justice and FTC are going to look into this particular activity under Section 7 of the Clayton Act.

If we look into Section 1, it specifically prohibits any activity, agreement that constitutes an unreasonable restraint of trade. Under section 5, the federal trade commission enforces or proscribes unfair methods of competition. So, there are three *Acts*, one is the Sherman Act, second is the Clayton Act and third is the FTC Act. The enforcement agency can look into the mergers of companies under any of these provisions.

(Refer Slide Time: 20:40)

The slide features a light green background with a white wavy line at the bottom. The title 'Business Review Letters' is centered at the top. A bullet point explains that persons concerned about the legality of proposed business conduct can request a statement from the Department of Justice regarding its enforcement intentions. The text references 28 C.F.R. Section 50.6. At the bottom, there are three logos: the Indian Institute of Technology (IIT) logo on the left, the NPTEL logo in the center, and a portrait of a man in a white shirt on the right. The text '© IIT Bombay, NPTEL, 2019' is visible at the bottom center.

Business Review Letters

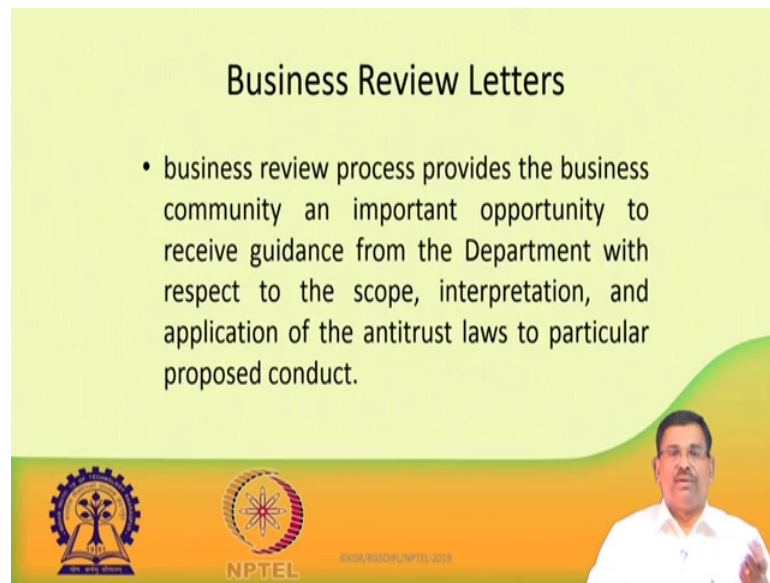

- Persons concerned about the legality under the antitrust laws of proposed business conduct may ask the Department of Justice for a statement of its current enforcement intentions with respect to that conduct pursuant to the Department's Business Review Procedure. See 28 C.F.R. Section 50.6.

Another method is the business review letters. The companies can go to the authorities, department of justice or FTC and take their views on the activities. The business review letters are nothing but advises from FTC or law enforcement agencies on competition.

So, here the people are concerned about the legality. The companies or individuals themselves make sure that they are not entering into any kind of illegal anti-competitive activities. So, they can approach the department of justice or the FTC. These are the proposed business conduct, particular business which they are going to carry out and current enforcement intentions with respect to the conduct of that particular business.

The department of justice and the FTC can look into that particular business, review the entire process and issue a business review letter which makes it sure before starting the business that the businessmen are not entering into any illegal activities under the Sherman Act or the Clayton Act or the FTC Act.

(Refer Slide Time: 22:02)

Business Review Letters

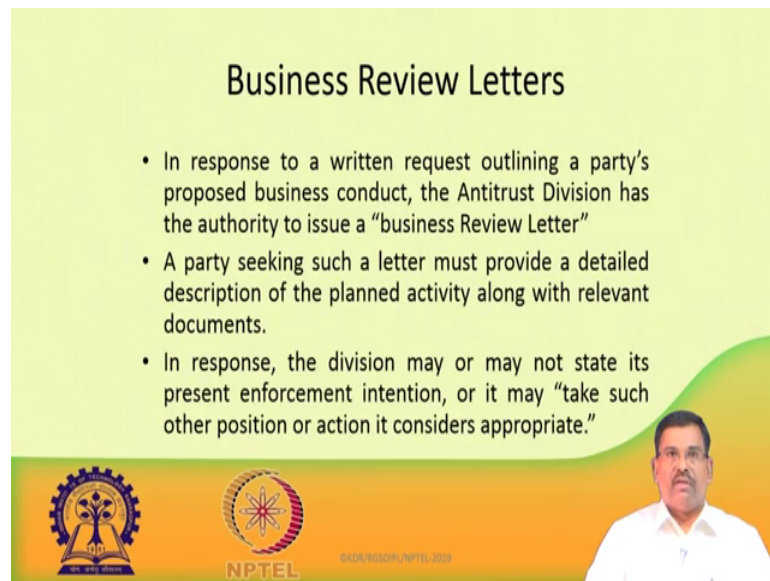

- business review process provides the business community an important opportunity to receive guidance from the Department with respect to the scope, interpretation, and application of the antitrust laws to particular proposed conduct.

The slide features a light green background with a wavy orange and yellow border at the bottom. On the left side of the bottom border, there are three logos: the Indian National Emblem, the NPTEL logo, and a small text logo '©2019, IISc/IITM/NPTEL 2019'. On the right side of the bottom border, there is a small inset image of a man in a white shirt speaking.

These business review letters gives an important opportunity to the businessman to get guidance from the department with respect to the scope, interpretation and application of the anti-trust laws to particular proposed conduct.

So, it gives, in advance, the advice from the department of justice or FTC with regard to particular business activity. So that the companies or the individuals can make sure that the activity which they are going to or the business which they are going to start or the business method is not anti-competitive in nature. The authorities issue business review letters in the form of advance advice to conduct a particular business which will be beneficial to the industry as well as beneficial to the enforcement agencies.

(Refer Slide Time: 23:13)

Business Review Letters

- In response to a written request outlining a party's proposed business conduct, the Antitrust Division has the authority to issue a "business Review Letter"
- A party seeking such a letter must provide a detailed description of the planned activity along with relevant documents.
- In response, the division may or may not state its present enforcement intention, or it may "take such other position or action it considers appropriate."

The slide features a green and yellow background with a white wavy line. At the bottom, there are three logos: the Department of Justice seal, the NPTEL logo, and a small copyright notice. A portrait of a man in a white shirt is visible on the right side of the slide.

You can see the process is simple and this is in response to a written request, outlining the parties proposed business conduct and then the anti-trust division will issue a business review letter. So, the party seeking such letter must provide a detailed description of the planned activity along with the concerned documents. And in response to the information which is disclosed to the department, the division may state its present enforcement intention, take such other position or action it considers appropriate. So, the department of justice advises on the particular activity whether it is going to violate any of the provisions of the competition law.

(Refer Slide Time: 24:11)

The Federal Trade Commission

- Unlike the DOJ, which is part of the executive branch, the FTC is an independent regulatory agency
- It is led by five Commissioners, appointed by the President for seven-year terms
- The FTC has three Bureaus: Competition, Consumer Protection, and Economics.

The slide features a light green background with a wavy orange and yellow border at the bottom. On the left, there are two logos: the Indian National Emblem and the NPTEL logo. On the right, there is a portrait of a man in a white shirt. The text is centered and uses a sans-serif font.

These are the activities of the department of justice. And now we will look into the activities of the federal trade commission. Federal trade commission is an independent regulatory body which is constituted under the Federal Trade Commission Act. It is led by five commissioners appointed by the president for a 7-year term. They have a much higher responsibility.

The FTC has three bureaus; the competition bureau, consumer protection bureau and the economics bureau. They have a larger role to see whether the competition authorities are harming consumer interest and economy in general, whether the economy is harmed or the market is harmed.

(Refer Slide Time: 24:59)

The Federal Trade Commission

Mission:

- To prevent business practices that are anticompetitive, deceptive, or unfair to consumers

Consumer Protection:

- The Federal Trade Commission Act provides that “unfair or deceptive acts or practices in or affecting commerce...are...declared unlawful.” (15 U.S.C. Sec. 45(a)(1))

Competition:

- The FTC Act also prohibits “unfair methods of competition.” (15 U.S.C. Sec. 45(a))
 - Including any conduct that violates the Sherman Antitrust Act or the Clayton Act

The slide features a portrait of a man in a white shirt on the right side. At the bottom, there are logos for IIT Bombay and NPTEL, along with the text '© IITB, NPTEL, 2019'.

The federal trade commission’s mission is prescribed on their website “to prevent business practices that are anti-competitive, deceptive or unfair to consumers”. The second objective is consumer protection. They clearly say that the Federal Trade Commission Act under the FTC Act, unfair or deceptive acts or practices affecting commerce are declared unlawful. And thirdly, they look into the competition, the FTC Act also prohibits unfair methods of competition, any kind of conduct which violates the Sherman Act or the Clayton Act.

FTC has a larger role. They look into all the legislations and they are involved in the enforcement of all the anti-trust legislation. But they will always try to see that it is overlapping with the department of justice. They work hand in hand and consult each other in order to avoid duplication of actions.

(Refer Slide Time: 26:19)

FTC

- FTC's role is to administer the Federal Trade Commission Act (FTC Act), principally Section 5 and also has the power to enforce the Clayton and Robinson-Patman Acts.
- Although it does not have the power directly to enforce the Sherman Antitrust Act (Sherman Act), it may do so indirectly under Section 5's broad mandate.

©2019 NPTEL/NPTEL 2019

FTC administers the FTC Act and principally Section 5 to enforce the Clayton Act and the Robinson-Patman Act and also they enforce Sherman Act as well as the Clayton Act indirectly under the Section 5. So, there is a broad mandate which is given to the FTC Act under Section 5. They can interfere, they can enforce any of the provisions of FTC Act, Sherman Act and Clayton Act. They can look under the various provisions, they have jurisdiction to look into specific conduct of the industry.

(Refer Slide Time: 27:00)

FTC

- the FTC shares responsibility with the DOJ for merger enforcement and is responsible, with input from the DOJ, for promulgating and enforcing the premerger notification rules that implement the HSR Act. (**Hart-Scott-Rodino Antitrust Improvements Act** of 1976).
- As an independent agency, the FTC has the power to issue cease and desist orders for violations of the FTC Act, an authority contained in Section 5(b) of the Act.

©2019 NPTEL/NPTEL 2019

At the same time, the FTC shares its responsibility with the department of justice for merger enforcement for promulgating and enforcing pre-merger notifications which are implemented under the Hart-Scott-Rodino Anti-trust Improvements Act of 1976. It is an independent agency. They have the power to pass cease and desist orders in the case of violations of the FTC Act under Section 5. So, they have wider powers under the FTC Act than in the other legislations.

(Refer Slide Time: 27:56)

The slide is titled "Enforcement" and lists several cases handled by the FTC. The background is a light green to yellow gradient. At the bottom, there are logos for IIT Bombay and NPTEL, along with a small portrait of a man in a white shirt. The text on the slide is as follows:

Enforcement

- Law Enforcement:
- Apple (\$32.5M settlement for in-app purchases)
- Honeywell (merger of bar code scanner companies) (competition)
- Nielsen (merger of audience measurement service companies) (competition)
- Wise Media (Mobile Cramming case)
- Jesta Digital, LLC (1st Wireless Access Protocol billing case)
- Goldshores Technologies, LLC (Popular flashlight app shares users location)
- TRENDnet (Faulty software in home security cameras)
- Source: Deon Woods Bell, FTC

If we look into some of the enforcements provisions which they put on their website, we can see various categories of cases dealt by the FTC. For example, the case of settlement of in-app purchases, it was a 32.5 million settlement with regard to apple. And all major companies such as Honeywell, merger of barcode scanner companies in the case of competition. Honeywell, Nielsen and Wise Media, Jesta Digital, TRENDnet, all these are different categories of dispute cases dealt by FTC.

They will look into different kind of activities involving the latest technologies, the technology companies, they will look into different kind of cases and take action against companies those who violate the provisions.

(Refer Slide Time: 28:56)

Competition Law Enforcement and Intellectual Property Rights

- Antitrust violations in the field of intellectual property rights are particularly difficult to detect because practices like cross licensing, patent pools or refusal to deal are not prohibited as such.
- Antitrust laws prohibit behaviour that go beyond what patents, copyright and trademarks generally allow.

The slide features a light green background with a wavy orange and yellow border at the bottom. On the left, there are two logos: the IIT Bombay logo and the NPTEL logo. On the right, there is a small portrait of a man in a white shirt. The text is centered and uses a sans-serif font.

When it comes to the enforcement of the intellectual property involved competition law cases, the FTC is very active. These cases are very technical in nature, very complicated in nature, but the FTC deal with these kind of cases in a series of areas like cross-licensing, patent pools, refusal to deal, tying and bundling, market divisions and all these have been dealt by us in detail in the last classes. The FTC looks into these activities and enforce the particular provisions.

Specifically the FTC looks into whether these companies/the patent owners are going beyond the rights conferred under patents or copyrights or trademarks. And they look into the anti-trust angle of their dealings especially in the case of licenses or cross-licenses or agreements or franchise agreements etc.. So, the FTC has a dual role; they have to look in from the intellectual property protection perspective as well as they have to look into the competition law perspective.

(Refer Slide Time: 30:28)

IP and Anti-trust

- For example price fixing, coordinated output restrictions or foreclosure of innovation are the most important practices to be prohibited by antitrust provisions
- Foreclosure of innovation is the most controversial.

The slide features a green and yellow background with a portrait of a man in a white shirt on the right. At the bottom, there are logos for IIT Bombay, NPTEL, and a copyright notice: © IIT Bombay/NPTEL 2019.

They usually look into the price-fixing and the coordinated output restrictions, foreclosure of innovations, prohibited other anti-trust activities very closely and these will be always controversial in nature.

(Refer Slide Time: 30:47)

Intellectual Property Rights and Merger Control

- In markets where innovation is an important competitive force, a merger may increase firm's ability and incentives to bring new innovations to the market and to exert pressure on rivals to innovate.
- Mergers may be approved by antitrust authorities also by accepting commitments by or imposing conditions on merging parties aimed at maintaining competition.

The slide features a green and yellow background with a portrait of a man in a white shirt on the right. At the bottom, there are logos for IIT Bombay, NPTEL, and a copyright notice: © IIT Bombay/NPTEL 2019.

We can find that intellectual property is present in merger control as well. So, innovation is the mantra of success for any particular company. Innovation can be purchased from another company, innovation can be acquired through mergers from another company.

This will increase the competitiveness of the company or increase the firm's ability to compete with its competitors in the market and also put pressure on the competitors to innovate, so that there will be a fair competition in the market.

But these mergers must be approved by the anti-trust authorities. It must get the signature of the anti-trust authorities. Because the merger rules very clearly say that none of the mergers should be for violating any of the provisions of the Sherman Act or Clayton Act or FTC Act. So no mergers can violate these provisions. If it is found later then these law enforcement agencies will enforce these particular provisions.

(Refer Slide Time: 32:10)

The slide is titled "Mergers" and features a light green background with a yellow-to-orange gradient at the bottom. It contains three bullet points:

- These remedies are either structural or behavioural
- Structural remedies are generally related to the selling of an activity, a line of business or a company in order to immediately restore competition in the market.
- Behavioural remedies are designed to modify or constrain the market conduct of merging firms.

At the bottom of the slide, there are three logos: the Indian Institute of Technology (IIT) logo on the left, the NPTEL logo in the center, and a small portrait of a man in a white shirt on the right. The text "© IIT Bombay/NPTEL 2015" is visible at the bottom center.

We can see that in the case of mergers there can be structural as well as behavioural aspects. The structural remedies are related to the selling of the activity, a line of business, in order to immediately restore competition in the market and the behavioural remedies are to modify or constrain the market conduct of the merging firms. So, the mergers have always had an angle of anti-trust. So, they should get the signatures of the anti-trust authorities in order to merge companies.

(Refer Slide Time: 32:49)

Technology Licensing Agreements

- Licensing practices such as technology grant-backs, tie-ins, territorial market limitations and field-of-use restrictions are often addressed under the provisions against restrictive agreements
- As to the substantive treatment of these practices, the trend in competition law case law is to treat these practices under a case-by-case or a "Rule of Reason" standard.

And there are a lot of controversies especially in the case of technology licensing agreements, so the licensing practices like technology grand back or tie-ins, territorial market limitations and field of use restrictions and all these restrictions will be addressed in the case of technology licensing. The FTC is to look into these kinds of activities very closely and sometimes these kind of activities cannot be declared per se illegal. The FTC has to look into these activities specifically under the rule of reason standard and check whether it is for the welfare of the market or not.

(Refer Slide Time: 33:47)

Rule of Reason

- Under the 'Rule of Reason' approach, if the agreement restricts actual or potential competition that would have existed without the agreement it may be considered restrictive.
- In this respect, agreements involving intellectual property do not require special provisions nor new rules.

The FTC looks into these agreements by applying the rule of reason. This can be potential or competitive and have existed without an agreement, it may be considered restrictive in nature. That means the rule of reason is a basic criterion to look into these particular agreements by FTC.

Intellectual property rights are given for a limited period of time and the enforcement agencies always look into whether these owners of the intellectual property are exceeding their rights conferred under the patents or trademarks or copyrights. This is the main duty of the enforcement agencies, and this is very complex in nature.

(Refer Slide Time: 34:47)

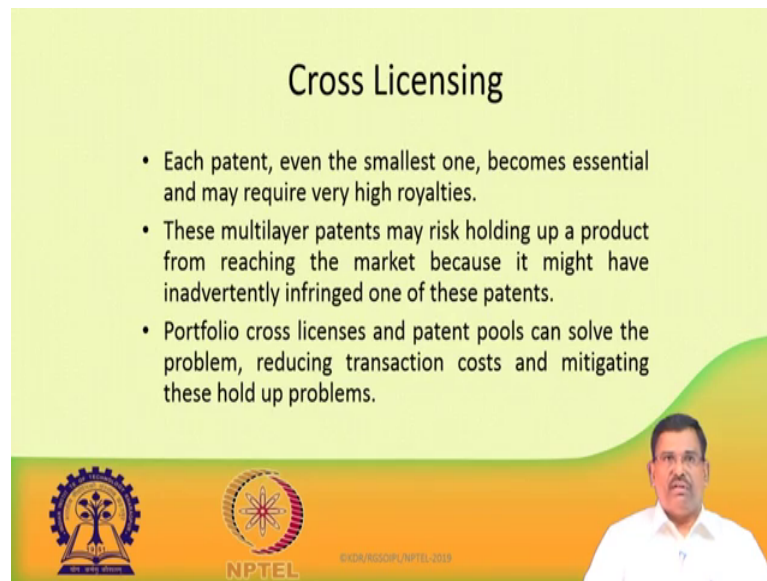

Portfolio of Cross Licensing Agreements, Patent Pools and Standard Setting Organizations

- Patent rights necessary to manufacture a given product may be fragmented by a number of patent holders
- This fragmentation may increase the cost of bringing a product to the market because of the multiple negotiations that may get involved

The slide features a light green background with a wavy orange and yellow border at the bottom. On the left, there are two circular logos: one with a gear and a tree, and another with a star-like pattern. In the center, the text 'NPTEL' is displayed. On the right, there is a portrait of a man in a white shirt. At the bottom right, the text '© IIT Bombay/NPTEL 2013' is visible.

In the case of patent rights, patent rights give monopoly for a limited period of time and the patent holders license, cross-license and even assign their rights to other companies that may be competitive companies. But the agencies, the law enforcement agencies always look into the purpose of the mergers or purpose of the transactions, purpose of the cross-licensing, whether it is for stopping or restraining competition in the market. This is the duty of the agencies to look into the cross-licensing agreements.

(Refer Slide Time: 35:30)

The slide features a light green background with a white title 'Cross Licensing' at the top center. Below the title are three bullet points. At the bottom, there is a dark green banner containing three logos on the left and a portrait of a man on the right. The logos include the Indian Institute of Technology (IIT) logo, the NPTEL logo, and a small copyright notice.

Cross Licensing

- Each patent, even the smallest one, becomes essential and may require very high royalties.
- These multilayer patents may risk holding up a product from reaching the market because it might have inadvertently infringed one of these patents.
- Portfolio cross licenses and patent pools can solve the problem, reducing transaction costs and mitigating these hold up problems.

© IITM/IGCCP/NPTEL 2019

Even the smallest IP(intellectual property), the smallest patent can yield big quantities of royalties because the competitive companies may want that particular patent to compete in the market along with their rival companies.

Portfolio cross-licenses and patent pools can solve this particular problem, in those cases pooling cross-licensing and pooling of patents are not per se illegal. The rule of reason will be applicable in those particular cases. This will reduce the transaction cost, this will be mitigating hold up problems and this will be good for the market. The FTC will look into these pro-active conditions to determine whether they are anti-competitive in nature or not.

(Refer Slide Time: 36:33)

Licensing

- These arrangements can of course be anticompetitive in so far as they result in price fixing, coordinated output restrictions or foreclosure of innovation.
- The risk of anticompetitive effect increases when the agreements extends not just to complementary, but also to substitute patents.

The slide features a green and yellow background with a wavy line at the bottom. On the left, there are two logos: the Indian Institute of Management (IIM) logo and the NPTEL logo. On the right, there is a small portrait of a man in a white shirt. The text is centered and in a black font.

We already discussed that, licensing and licensing activities are not at all prohibited. If any kind of activity is anti-competitive in nature, then only the FTC will consider them as violation of the anti-trust provision.

(Refer Slide Time: 36:57)

The Refusal to License

- Competition law does not generally impose on firms a duty to deal.
- When a firm refuses to deal with a customer, in most circumstances an intervention by a competition authority may not be justified.
- The underlying hypothesis is that refusing an opportunity for profit is not rational for any firm.
- On the other hand, refusal to deal with a competitor may be an abuse.

The slide features a green and yellow background with a wavy line at the bottom. On the left, there are two logos: the Indian Institute of Management (IIM) logo and the NPTEL logo. On the right, there is a small portrait of a man in a white shirt. The text is centered and in a black font.

Let us look into these individual activities which FTC looks into, for example, in the case of refusal to license, competition law imposes on firms a duty to deal. Refusal to license is considered to be a violation of the competition act. But when a firm refuses to

deal with a customer, in most of the cases, there is an intervention by the competition authority, intervention by the federal trade commission or department of justice. And in all those cases the activities are not justified ones. The only question, which the enforcement agencies look into is whether such refusal of such opportunity is fair or rational on the part of the firm or not.

Refusal to deal with a competitor may be abusive. Usually refuse to deal will be considered as anti-competitive in nature, but when we apply the rule of reason it may be pro-competitive as well. So, it is the duty of FTC to look into the pro-competitive effects on the market.

(Refer Slide Time: 38:21)

The slide features a light green background with a wavy orange and yellow border at the bottom. It contains the following text:

Tie-ins and Bundling

- A tie-in is the sale of one product on condition that the buyer purchase another product.
- Bundling refers to situations where a package of two or more products is offered.
- If only the bundle is offered and not its individual components then bundling is called “pure”, otherwise it is “mixed”.

At the bottom of the slide, there are three logos: the Indian Institute of Technology (IIT) logo on the left, the NPTEL logo in the center, and a portrait of a man in a white shirt on the right. The text '© IIT Bombay / NPTEL 2019' is visible at the bottom center.

There is another area which is the tie-in arrangements and bundling, which we have discussed elaborately earlier. Tie-in arrangements are considered to be per se illegal under the provisions of anti-trust law. In these cases one is compelling a customer to purchase something which he does not want to purchase, along with an item that may be patented or that may have some intellectual property on that product.

Bundling, when two or more products bundled together, is always considered as anti-competitive in nature, otherwise it is the duty of the defendant to prove that the bundling

of such products has a pro-competitive effect in the market otherwise tie-in arrangements are always considered as per se illegal.

(Refer Slide Time: 39:21)

The slide features a light green background with a wavy orange and yellow border at the bottom. The title 'Tying' is centered at the top. Below it are two bullet points. At the bottom left are the logos of IIT Bombay and NPTEL. At the bottom right is a portrait of a man in a white shirt. The text '© IIT Bombay/NPTEL 2018' is visible in the bottom right corner of the slide area.

Tying

- Tying and bundling should not be considered abusive if the firm lacks market power in the tying good.
- Even when the firm has market power, establishing that a tie-in or a bundle is in fact abusive requires detailed analysis of its purpose and the market context.

We saw a number of cases visited by the US courts which clearly said that in the case of tying and bundling if the firm lacks market power then the tying is not considered as anti-competitive in nature. So, it is the duty of the complainant to prove that the tie-in arrangements or bundling arrangements which are abusive in nature are against the market. The purpose has to be analysed very closely in the case of tying arrangements.

(Refer Slide Time: 40:04)

The slide features a light green background with a wavy orange and yellow border at the bottom. The title 'Tying' is centered at the top. Below it, two bullet points are listed. At the bottom, there are three logos: the Indian Institute of Technology (IIT) logo on the left, the NPTEL logo in the center, and a small portrait of a man on the right. The text '© IITM / IITK / NPTEL 2019' is visible at the bottom center.

Tying

- Tying may be motivated by the firm's desire to maintain or increase its reputation for quality or reliability.
- This should not be considered abusive since it increases efficiency and market demand.

The bottom line is that if the tying and bundling are abusive in nature they are not going to increase the efficiency of the market or demand, they will be considered as anti-competitive in nature.

(Refer Slide Time: 40:28)

The slide features a light green background with a wavy orange and yellow border at the bottom. The title 'Price Fixing' is centered at the top. Below it, a list of factors is provided. At the bottom, there are three logos: the Indian Institute of Technology (IIT) logo on the left, the NPTEL logo in the center, and a small portrait of a man on the right. The text '© IITM / IITK / NPTEL 2019' is visible at the bottom center.

Price Fixing

- Present or future prices
- Pricing policies
- Promotions
- Bids
- Costs
- Capacity
- Terms or conditions of sale, including credit terms
- Discounts
- Identity of customers
- Allocation of customers or sales areas
- Production quotas
- R&D plans

If we look into the price-fixing, which we have discussed earlier, we can find various type of price fixings. It is not only confined to the prices as such in technical terms. The price-fixing includes the future prices, pricing policies, promotional aspects or promo-

tional programs, bids, cost, capacity, the terms or conditions of sale, especially the credit terms, scale back or credit back, discounts, identity of customers, allocation of customers in geographical ways, production quotas, R&D plans.

All these headings will come under price-fixing. It is not just about fixing the prices. All these agencies tend to look very closely into the objective of price-fixing.

(Refer Slide Time: 41:41)

Bid Rigging

- Whenever business contracts are awarded by means of soliciting competitive bids, coordination among bidders undermines the bidding process and can be illegal.
- Bid rigging can take many forms, but one frequent form is when competitors agree in advance which firm will win the bid.
- For instance, competitors may agree to take turns being the low bidder, or sit out of a bidding round, or provide unacceptable bids to cover up a bid-rigging scheme.
- Other bid-rigging agreements involve subcontracting part of the main contract to the losing bidders, or forming a joint venture to submit a single bid.

The slide features a green and yellow gradient background. At the bottom, there are three logos: the Indian Institute of Technology (IIT) logo on the left, the NPTEL logo in the center, and a portrait of a man in a white shirt on the right. The text '© IIT Gandhinagar/NPTEL 2013' is visible at the bottom right.

Then comes the bid-rigging. We discussed bid-rigging and cartels very elaborately. Bid rigging is considered to be pernicious to the market as it is considered as illegal in nature because if two or more people or two or more firms come together on a prior agreement and if they are bidding there would be no competition in the market as such because the competitors will agree to take turns of being the lowest bidder. They will sit out of the bidding round and will be sitting for the next round of bidding. This is unacceptable, this is absolutely unacceptable to the market because these bid-rigging agreements are in the form of subcontracting and are also considered as cartelization.

Forming joint ventures for bid-rigging will also be considered as a violation of the anti-trust provisions. The federal trade commission or the department of justice very closely looks into the cartelization or the forms of cartelization, in the form of bid-rigging, the reasons for forming the joint ventures.

(Refer Slide Time: 43:18)

Market Division/Customer Allocation

- Plain agreements among competitors to divide sales territories or assign customers are almost always illegal.
- These arrangements are essentially agreements not to compete.

The slide features a light green background with a wavy orange and yellow border at the bottom. On the left, there are three logos: the Indian Institute of Technology (IIT) logo, the NPTEL logo, and a small copyright notice '© IIT Bombay/NPTEL 2019'. On the right, there is a portrait of a man in a white shirt.

The most important thing is the geographical distribution of markets or customer allocation. We saw some of the cases and the courts always said that these are per se illegal. It is the duty of the party to prove that this is not for curtailing the competition in the market. Generally geographical allocations are considered as per se illegal under the competition act, under the anti-competitive provisions in nature. Market allocation, customer allocation, geographical allocation will be considered as per se illegal under the Sherman Act.

(Refer Slide Time: 44:11)

Refusal to Deal/Boycotts

- Any company may, on its own, refuse to do business with another firm, but an agreement among competitors not to do business with targeted individuals or businesses may be an illegal boycott,
- especially if the group of competitors working together has market power.

The slide features a light green background with a wavy orange and yellow border at the bottom. On the left, there are three logos: the Indian Institute of Technology (IIT) logo, the NPTEL logo, and a small copyright notice '© IIT Bombay/NPTEL 2019'. On the right, there is a portrait of a man in a white shirt.

Another form is the refusal to deal, boycotting or refusal to do business with another firm. You can see that one competitor cannot be compelled to do business with another competitor, but the purpose has to be looked into.

If the refusal to deal has a pro-competitive effect in the market then that would not be illegal. But in most of the cases we can see that those are illegal. The boycotting or refusal to deal with a particular competitor will be considered as illegal especially when there is a group of competitors working together to capture the market or to capture some of the objectives which we mentioned earlier, then the refusal to deal will be considered as violative. This also has to be looked into by the department of justice and the federal trade commission.

(Refer Slide Time: 45:19)

The slide features a light green background with a white wavy line at the bottom. The title 'Other Agreements' is centered at the top. Below it are two bullet points. At the bottom, there are three logos: the Indian Institute of Technology (IIT) logo on the left, the NPTEL logo in the center, and a small portrait of a man on the right. The text '© IIT Bombay / NPTEL, 2019' is visible at the bottom center.

Other Agreements

- Other agreements among competitors that are not inherently harmful to consumers are examined under a flexible "rule of reason" standard that attempts to determine their overall competitive effect.
- Here the focus is on the nature of the agreement, the harm that could arise, and whether the agreement is reasonably necessary to achieve procompetitive benefits.

If you look into some of the other arrangements, any other kind of arrangements which are going to affect the market, will be considered by the department of justice and FTC. Whether they are harmful to the consumers, harmful to the market or anti-competitive in effect or nature will be considered by these law enforcement agencies but they will apply they will always apply the rule of reason. So, these two agencies work in tandem to look into all these kind of activities in the market, to see that everything in the market is to provide pro-competitive benefits to the consumers.

(Refer Slide Time: 46:09)

The slide features a light green background with a wavy bottom edge. The title 'Other Exclusionary Conduct' is centered at the top. Below it are two bullet points. At the bottom, there are three logos: IIT Bombay on the left, NPTEL in the center, and a portrait of a man on the right. The text '© IIT Bombay, NPTEL 2019' is visible at the bottom center.

Other Exclusionary Conduct

- The tension between antitrust enforcement and intellectual property rights is particularly severe in other type of exclusionary conduct.
- In other type of exclusionary conduct the antitrust violation is strictly related to the way intellectual property rights are actually enforced, rather than to the superimposition of an antitrust violation over existing intellectual property rights.

© IIT Bombay, NPTEL 2019

The law enforcement is very complicated for these two agencies in the United States. When enforcing intellectual property related anti-trust cases, these agencies find challenges or tensions, between the anti-trust enforcement and intellectual property protection. This exclusionary conduct or the conduct which we mentioned above whether it is tie-in or it is geographical location, etc. these violations coupled with intellectual property protection makes the determination very difficult and challenging for these particular agencies.

We discussed in this class, specifically, the enforcement agencies of the United States i.e. the department of justice and federal trade commission, their mandate and that these agencies look into different areas of the enforcement. These agencies are very important for enforcing intellectual property related competition cases because these are the two agencies engaged on a day-to-day basis to deal with both, corporations and individuals in intellectual property related competition cases.

I would say that United States is the one country, that is very liberal in nature in the case of doing business, at the same time it is very strict in enforcing the anti-trust laws, especially the anti-trust involved intellectual property protection cases. The best example is the *Microsoft case*. Microsoft involved a series of cases, in which tie-in arrangements and bundling was involved.

Whether it is the United States or the European Union, the anti-trust provisions are considered very serious legislation, that is why you have enforcement agencies strictly implementing these particular legislations.

If you look into India, we have to learn many things from these particular agencies as far as the enforcement is concerned, because we are in a very nascent stage of enforcement of the competition law. Our market is not a mature market. Our market is still developing. And we opened our economy in 1991 and the market is still not mature enough to accommodate all the provisions of the competition law.

But I would also say that, we have examples like that of the cement industry, the airline industry and other industries. We can see lot of cartelization in the Indian market and the enforcement with the competition commission. The competition commission requires a lot of expertise to deal with these ordinary cases, and especially when it comes to the **enforcement of intellectual property related cases**, they require a lot of expertise such as in the Microsoft case, the Singhanian case and the latest Micromax case.

You require a lot of expertise in the enforcement agencies, you require a lot of expertise in judiciary to deal with these competition involved cases. In the United States these two agencies play a very crucial role. Our competition commission has to look into the operation of these agencies in enforcing the anti-trust competition law.

I hope that, this comparison will help you to learn many things from other jurisdictions.

Thank you.
